ES2

E S2 is amazing. Thirty-two-voice polyphony, three individually variable oscillators, two filters, two LFOs, three envelope generators, more modulation routing options than you can imagine, surround capabilities, and then some. This is the ultimate subtractive synth in Logic. The default setting alone is impressive enough to make you stop and listen. Learning how to use ES2 will make it pretty easy to use any subtractive synth with confidence. It's that deep. Figure 8.1 shows the ES2 software instrument.

The ES2 Global Parameters

ES2 features a number of global parameters you've used before, plus a couple of new ones. Figures 8.2a and 8.2b shows the ES2 global parameters.

The ES2 global parameters are:

- **Tune.** The Tune parameter controls the fine tuning of ES2. You can detune ES2 + or -30 cents by clicking and dragging vertically in the Tune field or by double-clicking in the Tune field and entering the desired fine-tuning value.
- **Analog.** The Analog parameter controls the intensity of the analog-like variances in oscillator tuning and filter cutoff frequency. If you have ES2 in Legato or Mono mode, or you have the number of voices set to 1, the Analog parameter has no effect on ES2 unless you are in Unison mode.
- **CBD.** CBD stands for *Constant Beat Detuning*. In addition to being able to fine tune ES2 globally, you can fine tune each oscillator individually. When multiple sound sources, such as oscillators, play the same pitch but are slightly out of tune with one another, you can hear a phasing, called *beating*, in the tone. The higher the pitch sources are, the faster the beats are. This can make high pitches sound more out of tune compared to lower pitches. CBD can help by making these pitches beat more in sync, detuning the lower frequencies in proportion to the upper frequencies. The CBD parameter offers five values: Off, 25%, 50%, 75%, and 100%. To select a CBD value, click on the CBD field, which opens the menu shown in Figure 8.3.
