Applications Of Heat Pumps To Buildings:

Applications of Heat Pumps to Buildings A. F. C. Sherratt, 1987 **Design of Heat Exchangers for Heat Pump Applications** Marco Fossa, Antonella Priarone, 2020-12-28 Heat pumps HPs allow for providing heat without direct combustion in both civil and industrial applications They are very efficient systems that by exploiting electrical energy greatly reduce local environmental pollution and CO₂ global emissions The fact that electricity is a partially renewable resource and because the coefficient of performance COP can be as high as four or more means that HPs can be nearly carbon neutral for a full sustainable future The proper selection of the heat source and the correct design of the heat exchangers is crucial for attaining high HP efficiencies Heat exchangers also in terms of HP control strategies are hence one of the main elements of HPs and improving their performance enhances the effectiveness of the whole system Both the heat transfer and pressure drop have to be taken into account for the correct sizing especially in the case of mini and micro geometries for which traditional models and correlations can not be applied New models and measurements are required for best HPs system design including optimization strategies for energy exploitation temperature control and mechanical reliability Thus a multidisciplinary approach of the analysis is requested and become the future challenge **Applications and Efficiency of Heat Pump Systems** Ian E. Smith, 2013-11-11 The papers in this collection have originated from Britain Eastern and Western Europe and India with the delegates coming from fifteen countries including a strong contingent from Japan This indicates a widespread interest in the application of heat pumps The heat pump suffers from an environmental dichotomy On the one hand it saves fossil fuel energy thereby reducing CO emissions On the other hand in the vapour compression form 2 it generally employs CFCs which are destructive to our protective ozone layer as well as contributing to the greenhouse effect Taking the first heat pumps perhaps have the widest application numerically in the heating and cooling of buildings and an excellent paper describes case studies concerning three large Norwegian hotels In these heat was pumped from the adjacent river or sea when heating was required and during the summer when cooling became necessary to generate domestic hot water The heat pumps were installed by SINTEF Refrigeration Engineering Norway and have demonstrated payback periods of about two years The fractional total energy saving of the three hotels was 30% as a result an impressive figure indeed A similar paper by a Belgian architectural consortium shows how this technique can be successfully applied to the cooling of a large television complex where considerable quantities of heat were being generated by the luminaries In this exercise the cooling load was successfully pumped to provide hot water *Buildings Energy Conservation*, 1985 **Engineering Applications in Livestock Production** Ayon Tarafdar, Ashok Pandey, Gyanendra Kumar Gaur, Mukesh Singh, Hari Om Pandey, 2024-01-20 Engineering Applications in Livestock Production covers the recent advancements and technological developments in the field of livestock production engineering in great detail The major advances covered in this book include the use of artificial intelligence image processing Internet of Things novel animal

product processing technologies farm automation systems sensor technology bioengineering practices and even engineered housing systems among others The book includes applications of emerging sensor based and intelligent techniques systems in the field of livestock production and management The book will have separate chapters dedicated to innovative approaches in the livestock sector such as artificial intelligence micro and nano sensors IoT image processing and farm automation Specialists contribution of chapters provide comprehensive details while assisting the understanding of the concepts

Heat Pumps Takamoto Saito,2013-10-22 It has long been recognized that realizing the potential for energy conservation and diversification by using heat pumps offers considerable benefits to the environment Important work on more efficient and ozone friendly working fluids will further enhance the case for greater support of heat pump research This book contains the Proceedings of the Third International Energy Agency Conference held in Tokyo in March 1990 The main theme of the Conference Heat Pumps Solving Energy and Environmental Challenges is explained in great depth covering not only technical characteristics but economic factors and the role of government and other bodies in promoting research and the uses of all types of heat pumps are also fully considered As well as publishing the papers presented at the meeting the book also contains the extensive complementary poster sessions from the Conference

Solar Energy Application in Buildings A. A. M. Sayigh,2012-12-02 Solar Energy Application in Buildings discusses the successful utilization of the Sun s energy in various cultures continents and climates This book consists of 19 chapters and begins with considerable chapters devoted to the fundamentals of solar energy including climate storage and material properties The subsequent chapters discuss the concept of passive heating and cooling in buildings The remaining nine chapters deal with various applications of solar energy in buildings in the United States Iran Canada Germany Japan New Zealand Great Britain India and France This work will be of great value to scientists and engineers who are interested in the great potential of solar energy
