Biology ,1999      Information Processing in Social Insects Claire Detrain,Jean L. Deneubourg,Jacques M.

Pasteels,2012-12-06 Claire Detrain Jean Louis Deneubourg and Jacques Pasteels Studies on insects have been pioneering in major fields of modern biology In the 1970 s research on pheromonal communication in insects gave birth to the discipline of chemical ecology and provided a scientific frame to extend this approach to other animal groups In the 1980 s the theory of kin selection which was initially formulated by Hamilton to explain the rise of eusociality in insects exploded into a field of research on its own and found applications in the understanding of community structures including vertebrate ones In the same manner recent studies which decipher the collective behaviour of insect societies might be now setting the stage for the elucidation of information processing in animals Classically problem solving is assumed to rely on the knowledge of a central unit which must take decisions and collect all pertinent information However an alternative method is extensively used in nature problems can be collectively solved through the behaviour of individuals which interact with each other and with the environment The management of information which is a major issue of animal behaviour is interesting to study in a social life context as it raises additional questions about conflict cooperation trade offs Insect societies have proven particularly open to experimental analysis one can easily assemble or disassemble them and place them in controllable situations in the laboratory      **Biology** John Moore,2004-08 Teacher Manual for Biology A Search for Order in Complexity

Copeia ,1987      **The Science of Evolution and the Myth of Creationism** Ardea Skybreak,2006-09-01 This clear

lively and systematic presentation examines the scientific evidence for evolution and reaches for the widest possible audience from scientific minds to those with no science background at all Forcefully rejecting creationist objections to evolution and including a critique of Intelligent Design it argues that they are part of a larger social agenda With discussion that celebrates the fascination to be found in studying the diversity and complexity of life this examination suggests with some urgency that the science of evolution is crucial to the existence of science itself      **Clinical Hepatology** G. Csomos,H. Thaler,2012-12-06 Hepatology has come of age in the last decades Biology of the liver has flourished long before As the largest homogeneous organ of the body the liver served as useful model in the development of biochemistry and related disciplines Only gradually were these biological investigations applied to the clinical study of liver disease This was particularly stimulated by the recognition that in the greater part of the world the developing countries and what we now call the Third World liver disease represents a major threat to overall public health It leads to morbidity and mortality of persons in their productive years from liver cancer cirrhosis and parasitic disease particularly schistosomiasis Moreover the growing emphasis on the social impact of diseases focused on disorders of the liver because malnutrition poverty and drug addiction contribute greatly to their spread This is compounded by the increase of alcohol abuse recently on the rise even in the developing countries Concern with environmental pollution has also raised the interest in liver diseases in part because the liver acts as a guardian against

polluting chemicals and in part because it is considered possibly to an exaggerated degree a vulnerable target of such chemicals
