

46

Animal Reproduction

KEY CONCEPTS

- 46.1** Both asexual and sexual reproduction occur in the animal kingdom.
- 46.2** Fertilization depends on mechanisms that bring together sperm and eggs of the same species.
- 46.3** Reproductive organs produce and transport gametes.
- 46.4** The interplay of tropic and sex hormones regulates mammalian reproduction.
- 46.5** In placental mammals, an embryo develops fully within the mother's uterus.

▲ Figure 46.1 How can each of these sea slugs be both male and female?

Pairing Up for Sexual Reproduction

The sea slugs, or nudibranchs (*Nembrotha chamberlaini*), in **Figure 46.1** are mating. If not disturbed, these marine molluscs may remain joined for hours. Sperm will be transferred and will fertilize eggs. A few weeks later, sexual reproduction will be complete. New individuals will hatch, but which parent is the mother? The answer is simple yet probably unexpected: both. In fact, each sea slug produces eggs *and* sperm.

As humans, we tend to think of reproduction in terms of the mating of males and females and the fusion of sperm and eggs. Animal reproduction, however, takes many forms. In some species, individuals change their sex during their lifetime; in other species, such as sea slugs, an individual is both male and female. There are animals that can fertilize their own eggs, as well as others that can reproduce without any form of sex. For certain species, such as honeybees, only a few individuals within a large population reproduce.

A population outlives its members only by reproduction, the generation of new individuals from existing ones. In this chapter, we'll compare the diverse reproductive mechanisms that have evolved among animals. We'll then examine details of mammalian reproduction, with emphasis on the well-studied example of humans. We'll focus on reproduction mostly from the parents' perspective, deferring the details of embryonic development until the next chapter.

Biology Guide 46 Animal Reproduction

**James J. Sheehan, James John
Sheehan, Morton Sosna**

Biology Guide 46 Animal Reproduction:

Biology Neil A. Campbell, 2005 CD ROM contains investigations videos word study glossary cumulative tests and chapter guides **A Guide to the Breeding Habits and Immature Stages of Diptera Cyclorrhapha** P. Ferrar, 2024-01-15 The print edition is available as a set of two volumes 9789004085398 **World Guide to Special Libraries** Marlies Janson, Helmut Opitz, 2011-12-22 The World Guide to Special Libraries lists about 35 000 libraries world wide categorized by more than 800 key words including libraries of departments institutes hospitals schools companies administrative bodies foundations associations and religious communities It provides complete details of the libraries and their holdings and alphabetical indexes of subjects and institutions *Animal Reproduction*, 2022-05-25 Reproduction is the backbone of animal based food production The reproductive systems of animals vary and are species dependent In this regard all terrestrial animals perform internal fertilization whereas aquatic animals perform different reproductive strategies such as internal fertilization without mating external fertilization viviparous oviparous and parthenogenesis Today reproductive biotechnology is an important part of the conservation and propagation of animals This book addresses several hot topics in the field of reproduction of terrestrial and aquatic animals Over five sections and eight chapters this volume examines subjects such as cryopreservation embryo transfer avian reproduction intraovarian gestation and more *Selective Breeding in Aquaculture: an Introduction* Trygve Gjedrem, Matthew Baranski, 2010-03-17 The foundation of quantitative genetics theory was developed during the last century and facilitated many successful breeding programs for cultivated plants and terrestrial livestock The results have been almost universally impressive and today nearly all agricultural production utilises genetically improved seed and animals The aquaculture industry can learn a great deal from these experiences because the basic theory behind selective breeding is the same for all species The first published selection experiments in aquaculture started in 1920 s to improve disease resistance in sh but it was not before the 1970 s that the first family based breeding program was initiated for Atlantic salmon in Norway by AKVAFORSK Unfortunately the subsequent implementation of selective breeding on a wider scale in aquaculture has been slow and despite the dramatic gains that have been demonstrated in a number of species less than 10% of world aquaculture production is currently based on improved stocks For the long term sustainability of aquaculture production there is an urgent need to develop and implement efficient breeding programs for all species under commercial production The ability for aquaculture to successfully meet the demands of an ever increasing human population will rely on genetically improved stocks that utilise feed water and land resources in an efficient way Technological advances like genome sequences of aquaculture species and advanced molecular methods means that there are new and exciting prospects for building on these well established methods into the future *The Boundaries of Humanity* James J. Sheehan, James John Sheehan, Morton Sosna, 1991-01-01 An excellent interdisciplinary collage of considerable interest to philosophers psychologists computer scientists of a theoretical stripe sociologists and others

Rethinking our relationship to animals is very relevant I believe to thinking clearly about our current relationships to current and future machines Keith Gunderson University of Minnesota **The Students' Guide to Graduate Studies in the UK**,1993 Library List National Agricultural Library (U.S.),1947 The Commonwealth Relations Office Year Book Great Britain. Office of Commonwealth Relations,1958 **Library List** United States. Department of Agriculture. Library,1944
