Densification Impact On Raw, Chemically And Thermally

Pretreated Biomass: Physical Properties And Biofuels Production Jaya Shankar Tumuluru, 2023-05-29 First generation ethanol plants did not have many operational challenges as the feedstocks e.g. corn used for fuel production are dense, stable, storable and shippable commodity type products with fewer conversion challenges. These feedstock properties led the first generation large scale biorefineries to grow exponentially. In the second generation biofuels, the feedstocks used are agricultural and forest residues, dedicated energy crops, industrial wastes and municipal solid waste. When the industry tested these feedstocks for biofuel production, they faced flowability, storage, transportation and conversion issues. One way to overcome some of the feeding, handling, transportation and variable moisture challenges is to densify the biomass. Pellet mills and briquette presses are commonly used to produce densified products. The densified products have uniform size, shape, higher bulk density and better downstream conversion performance. Also, the densified products are aerobically stable and can be stored for longer durations without any loss in quality. This book's focus is on understanding how the densification process variables, biomass types and their blends, mechanical preprocessing and thermal and chemical pretreatment methods impact the quality of the densified products produced for biofuel production. Finally, the book also explores the conversion performance of densified biomass for biofuel production.

Platform Chemical Biorefinery Satinder Kaur Brar, Saurabh Jyoti Sarma, Kannan Pakshirajan, 2016-06-02 Platform Chemical Biorefinery: Future Green Chemistry provides information on three different aspects of platform chemical biorefinery. The book first presents a basic introduction to the industry, beneficial for university students, then provides engineering details of existing or potential platform chemical biorefinery processes helpful to technical staff of biorefineries. Finally, the book presents a critical review of the entire platform chemical biorefinery process, including extensive global biorefinery practices and their potential environmental and market-related consequences. Platform chemicals are building blocks of different valuable chemicals. The book evaluates the possibility of renewable feedstock-based platform chemical production and the fundamental challenges associated with this objective. Thus, the book is a useful reference for both academic readers and industry technical workers. The book guides the research community working in the field of platform chemical biorefinery to develop new pathways and technologies in combination with their market value and desirability. Offers comprehensive coverage of platform chemicals, biorefineries, recent advances and technology developments, potential issues for preventing commercialization and solutions. Discusses existing technologies for platform chemicals production, highlighting benefits as well as their possible adverse effects on the environment and food security. Includes a global market analysis of platform chemicals and outlines industry opportunities. Serves as a useful reference for both academic readers and industry technical workers.
