Biorthogonal Systems In Banach Spaces Cms S In Mathematics:

Biorthogonal Systems in Banach Spaces Petr Hajek, Vicente Montesinos Santalucia, Jon Vanderwerff, Vaclav Zizler, 2007-10-04 This book introduces the reader to some of the basic concepts results and applications of biorthogonal systems in infinite dimensional geometry of Banach spaces and in topology and nonlinear analysis in Banach spaces It achieves this in a manner accessible to graduate students and researchers who have a foundation in Banach space theory The authors have included numerous exercises as well as open problems that point to possible directions of research

Geometry of Banach Spaces and Related Fields Gilles Godefroy, Mohammad Sal Moslehian, Juan Benigno Seoane-Sepúlveda, 2024-03-27 This book provides a comprehensive presentation of recent approaches to and results about properties of various classes of functional spaces such as Banach spaces uniformly convex spaces function spaces and Banach algebras Each of the 12 articles in this book gives a broad overview of current subjects and presents open problems Each article includes an extensive bibliography This book is dedicated to Professor Per H Enflo who made significant contributions to functional analysis and operator theory *Homological Methods in Banach Space Theory* Félix Cabello Sánchez, Jesús M. F. Castillo, 2023-01-26 Many researchers in geometric functional analysis are unaware of algebraic aspects of the subject and the advances they have permitted in the last half century This book written by two world experts on homological methods in Banach space theory gives functional analysts a new perspective on their field and new tools to tackle its problems All techniques and constructions from homological algebra and category theory are introduced from scratch and illustrated with concrete examples at varying levels of sophistication These techniques are then used to present both important classical results and powerful advances from recent years Finally the authors apply them to solve many old and new problems in the theory of quasi Banach spaces and outline new lines of research Containing a lot of material unavailable elsewhere in the literature this book is the definitive resource for functional analysts who want to know what homological algebra can do for them *Open Problems in the Geometry and Analysis of Banach Spaces* Antonio J. Guirao, Vicente Montesinos, Václav Zizler, 2016-07-26 This is an collection of some easily formulated problems that remain open in the study of the geometry and analysis of Banach spaces Assuming the reader has a working familiarity with the basic results of Banach space theory the authors focus on concepts of basic linear geometry convexity approximation optimization differentiability renormings weak compact generating Schauder bases and biorthogonal systems fixed points topology and nonlinear geometry The main purpose of this work is to help in convincing young researchers in Functional Analysis that the theory of Banach spaces is a fertile field of research full of interesting open problems Inside the Banach space area the text should help expose young researchers to the depth and breadth of the work that remains and to provide the perspective necessary to choose a direction for further study Some of the problems are longstanding open problems some are recent some are more important and some are only local problems Some would require new ideas some may be resolved

with only a subtle combination of known facts Regardless of their origin or longevity each of these problems documents the need for further research in this area

Martingales in Banach Spaces Gilles Pisier, 2016-06-06 This book focuses on the major applications of martingales to the geometry of Banach spaces and a substantial discussion of harmonic analysis in Banach space valued Hardy spaces is also presented It covers exciting links between super reflexivity and some metric spaces related to computer science as well as an outline of the recently developed theory of non commutative martingales which has natural connections with quantum physics and quantum information theory Requiring few prerequisites and providing fully detailed proofs for the main results this self contained study is accessible to graduate students with a basic knowledge of real and complex analysis and functional analysis Chapters can be read independently with each building from the introductory notes and the diversity of topics included also means this book can serve as the basis for a variety of graduate courses

Descriptive Topology and Functional Analysis II Juan Carlos Ferrando, 2019-06-02 This book is the result of a meeting on Topology and Functional Analysis and is dedicated to Professor Manuel López Pellicer's mathematical research Covering topics in descriptive topology and functional analysis including topological groups and Banach space theory fuzzy topology differentiability and renorming tensor products of Banach spaces and aspects of Cp theory this volume is particularly useful to young researchers wanting to learn about the latest developments in these areas

Computational and Analytical Mathematics David H. Bailey, Heinz H. Bauschke, Peter Borwein, Frank Garvan, Michel Théra, Jon D. Vanderwerff, Henry Wolkowicz, 2013-09-15 The research of Jonathan Borwein has had a profound impact on optimization functional analysis operations research mathematical programming number theory and experimental mathematics Having authored more than a dozen books and more than 300 publications Jonathan Borwein is one of the most productive Canadian mathematicians ever His research spans pure applied and computational mathematics as well as high performance computing and continues to have an enormous impact MathSciNet lists more than 2500 citations by more than 1250 authors and Borwein is one of the 250 most cited mathematicians of the period 1980-1999 He has served the Canadian Mathematics Community through his presidency 2000-02 as well as his 15 years of editing the CMS book series Jonathan Borwein's vision and initiative have been crucial in initiating and developing several institutions that provide support for researchers with a wide range of scientific interests A few notable examples include the Centre for Experimental and Constructive Mathematics and the IRMACS Centre at Simon Fraser University the Dalhousie Distributed Research Institute at Dalhousie University the Western Canada Research Grid and the Centre for Computer Assisted Research Mathematics and its Applications University of Newcastle The workshops that were held over the years in Dr Borwein's honor attracted high caliber scientists from a wide range of mathematical fields This present volume is an outgrowth of the workshop on Computational and Analytical Mathematics held in May 2011 in celebration of Dr Borwein's 60th Birthday The collection contains various state of the art research manuscripts and surveys presenting contributions that have risen from the conference and is an excellent

opportunity to survey state of the art research and discuss promising research directions and approaches Separably Injective Banach Spaces Antonio Avilés, Félix Cabello Sánchez, Jesús M.F. Castillo, Manuel González, Yolanda Moreno, 2016-03-26 This monograph contains a detailed exposition of the up to date theory of separably injective spaces new and old results are put into perspective with concrete examples such as $l_{\infty}(K)$ and $C(K)$ spaces where K is a finite height compact space or an F space ultrapowers of L spaces and spaces of universal disposition It is no exaggeration to say that the theory of separably injective Banach spaces is strikingly different from that of injective spaces For instance separably injective Banach spaces are not necessarily isometric to or complemented subspaces of spaces of continuous functions on a compact space Moreover in contrast to the scarcity of examples and general results concerning injective spaces we know of many different types of separably injective spaces and there is a rich theory around them The monograph is completed with a preparatory chapter on injective spaces a chapter on higher cardinal versions of separable injectivity and a lively discussion of open problems and further lines of research Banach Space Theory Marián Fabian, Petr Habala, Petr Hájek, Vicente Montesinos, Václav Zizler, 2011-02-04 Banach spaces provide a framework for linear and nonlinear functional analysis operator theory abstract analysis probability optimization and other branches of mathematics This book introduces the reader to linear functional analysis and to related parts of infinite dimensional Banach space theory Key Features Develops classical theory including weak topologies locally convex space Schauder bases and compact operator theory Covers Radon Nikod m property finite dimensional spaces and local theory on tensor products Contains sections on uniform homeomorphisms and non linear theory Rosenthal s L_1 theorem fixed points and more Includes information about further topics and directions of research and some open problems at the end of each chapter Provides numerous exercises for practice The text is suitable for graduate courses or for independent study Prerequisites include basic courses in calculus and linear Researchers in functional analysis will also benefit for this book as it can serve as a reference book **Banach Algebras and Applications** Mahmoud Filali, 2020-08-24 Banach algebras is a multilayered area in mathematics with many ramifications With a diverse coverage of different schools working on the subject this proceedings volume reflects recent achievements in areas such as Banach algebras over groups abstract harmonic analysis group actions amenability topological homology Arens irregularity C^* algebras and dynamical systems operator theory operator spaces and locally compact quantum groups
