resulted in the recognition isolation and analysis of DNA binding proteins for several genes Excellent reviews exist of the structural studies on these transcription regulatory proteins and related DNA elements for example Glover 1989 and Johnson and McKnight 1989 to which the reader is referred for detailed information To set the scene for applications of the techniques described in this volume only the barest outline of previous studies is presented here Protein DNA interactions are dependent on very specific tertiary configurations of the binding protein which allow the closest contact with the DNA helix
