## **Bio Invaders Themes In Environmental History:**

**Invasive and Introduced Plants and Animals** Ian D. Rotherham, Robert A. Lambert, 2012-12-06 There have been many well publicized cases of invasive species of plants and animals often introduced unintentionally but sometimes on purpose causing widespread ecological havoc Examples of such alien invasions include pernicious weeds such as Japanese knotweed an introduced garden ornamental which can grow through concrete the water hyacinth which has choked tropical waterways and many introduced animals which have out competed and displaced local fauna This book addresses the broader context of invasive and exotic species in terms of the perceived threats and environmental concerns which surround alien species and ecological invasions As a result of unprecedented scales of environmental change combined with rapid globalisation the mixing of cultures and diversity and fears over biosecurity and bioterrorism the known impacts of particular invasions have been catastrophic However as several chapters show reactions to some exotic species and the justifications for interventions in certain situations including biological control by introduced natural enemies rest uncomfortably with social reactions to ethnic cleansing and persecution perpetrated across the globe The role of democracy in deciding and determining environmental policy is another emerging issue In an increasingly multicultural society this raises huge questions of ethics and choice At the same time in order to redress major ecological losses the science of reintroduction of native species has also come to the fore and is widely accepted by many in nature conservation However with questions of where and when and with what species or even species analogues reintroductions are acceptable the topic is hotly debated Again it is shown that many decisions are based on values and perceptions rather than objective science Including a wide range of case studies from around the world his book raises critical issues to stimulate a much wider debate **Bioinvaders** Sarah Johnson, 2010 We are pleased to announce a new series of environmental history readers suitable for students Comprising essays selected from our journals *Environment and History* and *Environmental Values* each inexpensive paperback volume will address an important theme in environmental history combining underlying theory and specific case studies The first volume *Bio invaders* investigates the rhetoric and realities of exotic introduced and alien species The book comprises a number of general essays exploring and challenging common perceptions about such species and a series of case studies of specific species in specific contexts Its geographical coverage ranges from the United Kingdom to New Zealand by way of South Africa India and Palestine and the essays cover both historical and recent introductions *A Companion to Global Environmental History* J. *Trees in Paradise* Jared Farmer, 2013-10-21 From roots to canopy a lush verdant history of the making of California California now has more trees than at any time since the late Pleistocene This green landscape however is not the work of nature It s the work of history In the years after the Gold Rush American settlers remade the California landscape harnessing nature to their vision of the good life Horticulturists boosters and civic reformers began to improve the bare brown countryside planting millions of trees to create groves wooded suburbs and landscaped cities They imported the blue green eucalypts whose tangy fragrance was thought to cure malaria They built the lucrative Orange Empire on the sweet juice and thick skin of the Washington navel an industrial fruit They lined their streets with graceful palms to announce that they were not in the Midwest anymore To the north the majestic coastal redwoods inspired awe and invited exploitation A resource in the state the durable heartwood of these timeless giants became infrastructure transformed by the saw teeth of American enterprise By 1900 timber firms owned the entire redwood forest by 1950 they had clear cut almost all of the old growth trees In time California s new landscape proved to be no paradise the eucalypts in the Berkeley hills exploded in fire the orange groves near Riverside froze on cold nights Los Angeles s palms harbored rats and dropped heavy fronds on the

streets below Disease infestation and development all spelled decline for these nonnative evergreens In the north however a new forest of second growth redwood took root nurtured by protective laws and sustainable harvesting Today there are more California redwoods than there were a century ago Rich in character and story *Trees in Paradise* is a dazzling narrative that offers an insightful new perspective on the history of the Golden State and the American West **Environmental History**

**of the Rhine-Meuse Delta** P.H. Nienhuis,2008-05-06 This unique text presents the environmental history of the lowland delta of the rivers Rhine and Meuse It is an ecological story of evolving human environmental relations and how they cope with climate change and sea level rise The text offers a combination of in depth ecology and environmental history The synthesis presents a blueprint for future management and restoration from progressive reclamation of land in the past to adaptation of human needs to the forces of nature *Conceptual Ecology and Invasion Biology: Reciprocal Approaches to Nature* Marc W. Cadotte,Sean M. McMahon,Tadashi Fukami,2006-07-19

The conservation threat represented by invasive species is well known but the scientific opportunities are underappreciated Invasion studies have historically been largely directed at the important job of collecting case studies Invasion biology has matured to the point of being able to incorporating itself into the heart of ecology and should be viewed as extensions or critical experiments of ecological theory In this edited volume global experts in ecology and evolutionary biology explore how theories in ecology elucidate the invasion processes while also examining how specific invasions informs ecological theory This reciprocal benefit is highlighted in a number of scales of organization population community and biogeographic while employing example invaders in all major groups of organisms and from a number of regions around the globe The chapters in this volume utilize many of the cutting edge observational experimental analytical and computational methods used in modern ecology Through merging conceptual ecology and invasion biology we can obtain a better understanding of the invasion process while also developing a better understanding of how ecological systems function **Issues in Global Environment: Biology and Geoscience: 2011 Edition** ,2012-01-09
