Echinoderm Research and Diversity in Latin America Juan José Alvarado, Francisco Alonso Solis-Marin, 2012-08-07 This book compiles for the first time the development of echinoderm research in Latin America. The book contains 17 chapters: one introductory, 15 country chapters, and a final biogeographic analysis. It compiles all the investigations published in international and local journals, reports, theses, and other gray literature. Each chapter is composed of 7 sections: introduction, describes the marine environments and main oceanographic characteristics, followed by a history of research account divided by specific subjects. The next section addresses patterns of distribution and diversity. A specific section would explain fishery or aquaculture activities. The next sections deal with environmental and anthropogenic threats that are affecting echinoderm and any conservation or management action. Finally, a section with conclusions, needs, and new lines of research. The book will include two appendixes with species lists of all echinoderms with bathymetric data, habitat, and distribution.
