1. Adaptive radiation (be able to identify examples, and why it would occur):
 - o Adaptive radiation- the evolution of many diverse species from a single common ancestor
 - Occurs when an environment has many different habitats with their own evolutionary pressures
 - After a mass extinction, where they have to fill all the ecological niches
 - o Ex. finches on the Galapagos Islands
 - A single species of finch reached the island first. Then, as the finches settled on each of the islands, they diverged from each other as they adapted to the distinct environments of each island
2. Agonistic behavior (be able to identify examples):
 - o Agonistic behavior- confrontational behavior that settles disputes over limited resources, such as food, mates, or territory; essentially tests of strength
 - Agonistic behavior uses ritualized contests instead of real combat because combat is energy-intensive and reduces fitness
 - Arm wrestling is cheaper than a gunfight
 - o Ex. dogs growl to warn intruders off of its territory
3. Analogy (be able to identify examples):
 - o Analogy- similarity due to convergent evolution
 - o Ex. Australian moles and North American moles look similar despite appearing on completely different continents. This occurred because their environments (or evolutionary pressures) are similar.
