Chapter 22: Descent with Modification: A Darwinian View of Life

As you study this chapter, read several paragraphs at a time to catch the flow of ideas and understand the reasoning that is being described. In some places, the text describes a narrative or story of events that led to Darwin's theory of evolution. Therefore, first read the narrative to absorb the big picture and then return to answer the few questions that accompany this material.

Overview

1. Define *evolution* broadly and then give a narrower definition, as discussed in the overview.
specific: a change over time in the genetic composition of a population;
broad: populations change over generations

Concept 22.1 The Darwinian revolution challenged the traditional view of a young Earth inhabited by unchanging species

This section takes a look at the historical setting and influences on Darwin, and it sets the stage for our formal study of evolution.

2. How did each of the following sources view the origin of species?

Aristotle and Scala Naturae

Viewed species as fixed and unchanged

The Old Testament

Species were individually designed by God, and thus perfect

Carolus Linnaeus

Developed taxonomy, which would classify the diversity of God

Georges Cuvier

Believed in catastrophism, and not in evolution

3. Explain the role of *fossils in rock strata* as a window to life in earlier times.

Fossils are remains or traces of organisms from the past. Because rocks are in layers, time periods can be divided into such layers, and thus the gradual changes in creatures over time periods can be observed

4. How would *Georges Cuvier* have explained the appearance of the record of life shown in the rock strata?

Catastrophism: each boundary represents a catastrophe that destroyed many of the species at the time.
