Ajay Singh, Owen P. Ward, 2013-06-29 The huge expansion of the chemical and petroleum industries in the twentieth century has resulted in the production of a vast array of chemical compounds and materials that have transformed our lives The associated large scale manufacturing processing and handling activities have caused a serious deterioration in environmental quality and created threats to human health These negative impacts have led to responses and regulations requiring remedial action in support of environmental sustainability of biotechnological methods through bioremediation Application has gained prominence as an option for soil remediation methods Bioremediation is a multidisciplinary approach where biologists chemists soil scientists and engineers work as team to develop and implement remediation processes Bioremediation has now been used successfully to remediate many petroleum contaminated sites However there are as yet no commercial technologies commonly used to remediate the most recalcitrant contaminants Nevertheless bioremediation is a rapidly advancing field and new bio based remedial technologies are continuing to emerge Bioremediation of Emerging Contaminants from Soils Prasann Kumar, Veena Chaudhary, Eric D. van Hullebusch, Rosa Busquets, Arun Lal Srivastav, 2024-05-09 Bioremediation of Emerging Contaminants from Soils Soil Health Conservation Along with Food
