Bioaesthetics Carsten Strathausen, 2017-10-15 In recent years bioaesthetics has used the latest discoveries in evolutionary studies and neuroscience to provide new ways of looking at art and aesthetics Carsten Strathausen's remarkable exploration of this emerging field is the first comprehensive account of its ideas as well as a timely critique of its limitations Strathausen familiarizes readers with the basics of bioaesthetics grounding them in its philosophical underpinnings while articulating its key components Importantly he delves into the longstanding problem of the two cultures that separate the arts and the sciences Seeking to make bioaesthetics a more robust way of thinking Strathausen then critiques it for failing to account for science's historical and cultural assumptions At its worst he says biologism reduces artworks to mere automatons that rubber stamp pre-established scientific truths Written with a sensitive understanding of science's strengths and willing to refute its best arguments Bioaesthetics helps readers separate the sensible from the specious At a time when humanities departments are shrinking and when STEM education is on the rise Bioaesthetics makes vital points about the limitations of science while lodging a robust defense of the importance of the humanities

Telling Stories / Geschichten erzählen Carsten Gansel, Dirk Vanderbeke, 2012-02-22 The essays collected in this volume highlight the narrative as a phenomenon inherent in human nature They examine the likely purpose of artistic and literary expression and its contribution to survival in an early human environment They also consider the developing interest in shaping experience through the narrative and investigate the consequent significance of traits acquired throughout the ages for the production and reception of texts In doing so the book provides a highly diverse overview of the latest research and debates in this innovative field of research

The Artful Species Stephen Davies, 2012-11-29 The Artful Species explores the idea that our aesthetic responses and art behaviors are connected to our evolved human nature Our humanoid forerunners displayed aesthetic sensibilities hundreds of thousands of years ago and the art standing of prehistoric cave paintings is virtually uncontested In Part One Stephen Davies analyses the key concepts of the aesthetic art and evolution and explores how they might be related He considers a range of issues including whether animals have aesthetic tastes and whether art is not only universal but cross culturally comprehensible Part Two examines the many aesthetic interests humans take in animals and how these reflect our biological interests and the idea that our environmental and landscape preferences are rooted in the experiences of our distant ancestors In considering the controversial subject of human beauty evolutionary psychologists have traditionally focused on female physical attractiveness in the context of mate selection but Davies presents a broader view which decouples human beauty from mate choice and explains why it goes more with social performance and self presentation Part Three asks if the arts together or singly are

biological adaptations incidental byproducts of nonart adaptations or so removed from biology that they rate as purely cultural technologies Davies does not conclusively support any one of the many positions considered here but argues that there are grounds nevertheless for seeing art as part of human nature Art serves as a powerful and complex signal of human fitness and so cannot be incidental to biology Indeed aesthetic responses and art behaviors are the touchstones of our humanity

Why Fairy Tales Stick Jack Zipes, 2013-09-13 In his latest book fairy tales expert Jack Zipes explores the question of why some fairy tales work and others don't why the fairy tale is uniquely capable of getting under the skin of culture and staying there Why in other words fairy tales stick Long an advocate of the fairy tale as a serious genre with wide social and cultural ramifications Jack Zipes here makes his strongest case for the idea of the fairy tale not just as a collection of stories for children but a profoundly important genre Why Fairy Tales Stick contains two chapters on the history and theory of the genre followed by case studies of famous tales including Cinderella Snow White and Bluebeard followed by a summary chapter on the problematic nature of traditional storytelling in the twenty first century

The Evolutionary Imagination in Late-Victorian Novels John Glendening, 2013-04-28 Dominated by Darwinism and the numerous guises it assumed evolutionary theory was a source of opportunities and difficulties for late Victorian novelists Texts produced by Wells Hardy Stoker and Conrad are exemplary in reflecting and participating in these challenges Not only do they contend with evolutionary complications John Glendening argues but the complexities and entanglements of evolutionary theory interacting with multiple cultural influences thoroughly permeate the narrative descriptive and thematic fabric of each All the books Glendening examines from The Island of Doctor Moreau and Dracula to Heart of Darkness address the interrelationship between order and chaos revealed and promoted by evolutionary thinking of the period Glendening's particular focus is on how Darwinism informs novels in relation to a late Victorian culture that encouraged authors to stress not objective truths illuminated by Darwinism but rather the contingencies uncertainties and confusions generated by it and other forms of evolutionary theory
