Biosensing Jerome Schultz, Milan Mrksich, Sangeeta N. Bhatia, David J. Brady, Antonio J. Ricco, David R. Walt, Charles L. Wilkins, 2006-07-15 We have come to know that our ability to survive and grow as a nation to a very large degree depends upon our scientific progress Moreover it is not enough simply to keep abreast of the rest of the world in scientific matters 1 We must maintain our leadership President Harry Truman spoke those words in 1950 in the aftermath of World War II and in the midst of the Cold War Indeed the scientific and engineering leadership of the United States and its allies in the twentieth century played key roles in the successful outcomes of both World War II and the Cold War sparing the world the twin horrors of fascism and totalitarian communism and fueling the economic prosperity that followed Today as the United States and its allies once again find themselves at war President Truman's words ring as true as they did a half century ago The goal

set out in the Truman Administration of maintaining leadership in science has remained the policy of the U S Government to this day Dr John Marburger the Director of the Office of Science and Technology OSTP in the Executive Office of the President made remarks to that effect during his confirmation hearings in October 2 2001
