you through building complex objects from basic shapes along with introducing some of Blender's modifiers such as Mirror and Subdivision Surface. Later you'll get to grips with using Blender's Cycles render engine to create materials for objects, light your scenes and develop stunning renders. You'll discover Blender's camera and render settings before going on to learn the different kinds of light that Blender has to offer. Using the Node Editor, you'll even be able to create and modify materials for your scene. Since the interaction of materials and lighting is an important part of any scene, this course will guide you through the fundamental concepts and techniques you'll need to know to achieve great renders in Blender. Finally, the course will focus on what UV mapping is and why it is important. You'll then get up to speed with the different tools for UV mapping your 3D objects. You'll also gain insights into exporting your UV maps out of Blender so you can build textures in image editing programs such as GIMP. Later you'll bring these textures into Blender and assign them to your objects using the Node Editor. In addition to this, you will work with Blender's Texture Painting tools and examine how you can paint textures directly on your 3D models. By the end of this course, you will be equipped with the knowledge you need to effectively use Blender for a variety of tasks, right from 3D modeling through to rendering.
