Sociobiology of Communication Patrizia d'Ettorre, David P. Hughes, 2008-08-21 Communication is essential for all forms of social interaction from parental care to mate choice and cooperation This is evident for human societies but less obvious for bacterial biofilms and colonies or flocks of birds The major disciplines of communication research have tried to identify common core principles but syntheses have been few because historical barriers have limited interaction between different research fields Sociobiology of Communication is a timely and novel synthesis It bridges many of the gaps between proximate and ultimate levels of analysis between empirical model systems and between biology and the humanities The book offers the complementary approaches of a distinguished group of authors spanning a large diversity of research programs addressing for example the genetic basis of bacterial communication dishonest communication in insect societies sexual selection and network communication among colonial vertebrates Other chapters explore the role of communication in genomic conflict and self organisation and how linguistics psychology and philosophy may ultimately contribute to a biological understanding of human mate choice and the evolution of human societies This highly interdisciplinary book highlights key examples of modern research to explore the genetic neurobiological physiological chemical and behavioural basis of social communication It identifies where consensus on the general principles is emerging and where the major future challenges are to be found The book is therefore suitable for both for graduate students and professionals in evolutionary

biology and behavioural ecology seeking novel inspiration and for a wider academic audience including social and medical scientists who would like to explore what evolutionary approaches can offer to their fields **When Life Nearly Died**

Michael J. Benton, 2015-08-24 The focus is the most severe mass extinction known in earth's history The science on which the book is based is up to date thorough and balanced Highly recommended Choice Today it is common knowledge that the dinosaurs were wiped out by a meteorite impact 65 million years ago that killed half of all species then living It is far less widely understood that a much greater catastrophe took place at the end of the Permian period 251 million years ago at least ninety percent of life on earth was destroyed When Life Nearly Died documents not only what happened during this gigantic mass extinction but also the recent renewal of the idea of catastrophism the theory that changes in the earth's crust were brought about suddenly in the past by phenomena that cannot be observed today Was the end Permian event caused by the impact of a huge meteorite or comet or by prolonged volcanic eruption in Siberia The evidence has been accumulating and Michael J Benton gives his verdict at the end of the volume The new edition brings the study of the greatest mass extinction of all time thoroughly up to date In the twelve years since the book was originally published hundreds of geologists and paleontologists have been investigating all aspects of how life could be driven to the brink of annihilation and especially how life recovered afterwards providing the foundations of modern ecosystems **The Complete Dinosaur** M. K.

Brett-Surman, Thomas R. Holtz, James O.
