Affine Diffusions and Related Processes: Simulation, Theory and Applications Aurélien Alfonsi,2015-04-30

This book gives an overview of affine diffusions from Ornstein Uhlenbeck processes to Wishart processes and it considers some related diffusions such as Wright Fisher processes It focuses on different simulation schemes for these processes especially second order schemes for the weak error It also presents some models mostly in the field of finance where these methods are relevant and provides some numerical experiments The book explains the mathematical background to understand affine diffusions and analyze the accuracy of the schemes

Risk Theory Hanspeter Schmidli,2018-04-04 This book provides an overview of classical actuarial techniques including material that is not readily accessible elsewhere such as the Ammeter risk model and the Markov modulated risk model Other topics covered include utility theory credibility theory claims reserving and ruin theory The author treats both theoretical and practical aspects and also discusses links to Solvency II Written by one of the leading experts in the field these lecture notes serve as a valuable introduction to some of the most frequently used methods in non life insurance They will be of particular interest to graduate students researchers and practitioners in insurance finance and risk management

Option Pricing and Estimation of Financial Models with R Stefano M. Iacus,2011-02-23 Presents inference and simulation of stochastic process in the field of model calibration for financial times series modelled by continuous time processes and numerical option pricing Introduces the bases of probability theory and goes on to explain how to model financial times series with continuous models how to calibrate them from discrete data and further covers option pricing with one or more underlying assets based on these models Analysis and implementation of models goes beyond the standard Black and Scholes framework and includes Markov switching models Levy models and other models with jumps e g the telegraph process Topics other than option pricing include volatility and covariation estimation change point analysis asymptotic expansion and classification of financial time series from a statistical viewpoint The book features problems with solutions and examples All the examples and R code are available as an additional R package therefore all the examples can be reproduced
