A Unified Theory Of Information Design Visuals Text Ethics Baywoods Technical Communication:

A Unified Theory of Information Design Nicole Amare, Alan Manning, 2016-11-03 Communicative visuals including written text have a diverse range of forms and purposes. In this volume the authors show that it is possible to both describe and explain the major properties of diverse visual communication forms and purposes within a common theoretical framework of information design and ethics. For those unaccustomed to thinking of written text as a visual form belonging to the same general class as other visual forms (colour, texture, shape, imagery, etc.) consider how a text's readability suffers if we remove all white space and punctuation which can be identified as visual signals of the same subtype as grid lines and bullet points dividing and calling attention to adjacent information. The authors identify deep connections between foundational visual design elements and the grammar of language itself. No physicist or chemist today questions the value of a single theory that describes and explains a wide variety of phenomena, but oddly enough the authors have frequently been asked why they are interested in advancing a unified theory of visual communication. The simplest answer is to treat visual communication as a science and seeking unified theories is just what science does. In more practical terms, a unified approach to visual communication allows us to teach visual design students relatively few things that will enable them to do relatively many things.

A Unified Theory of Information Design Nicole Amare, Alan D. Manning, 2012 **Plain Language and Ethical Action** Russell Willerton, 2015-05-22 Plain Language and Ethical Action examines and evaluates principles and practices of plain language that technical content producers can apply to meet their audiences' needs in an ethical way. Applying the BUROC framework (Bureaucratic Unfamiliar Rights Oriented and Critical) to identify situations in which audiences will benefit from plain language, this work offers in-depth profiles showing how six organizations produce effective plain language content. The profiles show plain language projects done by organizations ranging from grassroots volunteers on a shoestring budget to small nonprofits to consultants completing significant federal contracts. End of chapter questions and exercises provide tools for students and practitioners to reflect on and apply insights from the book. Reflecting global commitments to plain language, this volume includes a case study of a European group based in Sweden along with results from interviews with plain language experts around the world including Canada, England, South Africa, Portugal, Australia, and New Zealand. This work is intended for use in courses in information design, technical and professional communication, health communication, and other areas producing plain language communication. It is also a crucial resource for practitioners developing plain language technical content and content strategists in a variety of fields including health literacy, technical communication, and information design.

Humanizing Visual Design Charles Kostelnick, 2019-03-28 This book analyzes the role that human forms play in visualizing practical information and in making that information understandable, accessible, inviting, and meaningful to readers. In short, humanizing it. Although human figures have long been deployed in practical communication, their uses in this context have received little systematic analysis. Drawing on rhetorical theory, art history,

design studies and historical and contemporary examples the book explores the many rhetorical purposes that human forms play in functional pictures including empowering readers narrating processes invoking social and cultural identities fostering pathos appeals and visualizing data The book is aimed at scholars teachers and practitioners in business technical and professional communication as well as an interdisciplinary audience in rhetoric art and design journalism engineering marketing science and history

Information Design Rune Pettersson, 2002 The goal of communication oriented design of messages should always be clarity of communication In information design the task of the sender is actually not completed until the receivers have received and understood the intended messages Information Design An introduction includes chapters explaining verbal visual communication information and message design principles design processes and design tools These chapters can be seen as a general framework for production of information and learning materials Based on theories for verbal visual communication this book presents several practical guidelines for the use of text symbols visuals typography and layout in information and learning materials Rune Pettersson is Professor of Information Design at the Department of Innovation Design and Product Development IDP at Mälardalen University in Eskilstuna Sweden
