Asymptotic Expansions A. Erdélyi, 1956-01-01 Originally prepared for the Office of Naval Research this important monograph introduces various methods for the asymptotic evaluation of integrals containing a large parameter and solutions of ordinary linear differential equations by means of asymptotic expansions Author's preface Bibliography Asymptotic Expansions. Asymptotic expansions Arthur Erdélyi, 1965 *Matched Asymptotic Expansions* P.A. Lagerstrom, 2013-03-09 Content and Aims of this Book Earlier drafts of the manuscript of this book James A. Boyd then coauthor contained discussions of many methods and examples of singular perturbation problems The ambitious plans of covering a large number of topics were later abandoned in favor of the present goal a thorough discussion of selected ideas and techniques used in the method of matched asymptotic expansions Thus many problems and methods are not covered here the method of averaging and the related method of multiple scales are mentioned mainly to give reasons why they are not discussed further Examples which required too sophisticated and involved calculations or advanced knowledge of a special field are not treated for instance to the author's regret some very interesting applications to fluid mechanics had to be omitted for this reason Artificial mathematical examples introduced to show some exotic or unexpected behavior are omitted except when they are analytically simple and are needed to illustrate mathematical phenomena important for realistic problems Problems of numerical analysis are not discussed *Handbook of Mathematical Functions* Milton Abramowitz, Irene A.

Introduction to Asymptotics and Special Functions F. W. J. Olver, 2014-05-10 Introduction to Asymptotics and Special Functions is a comprehensive introduction to two important topics in classical analysis asymptotics and special functions The integrals of a real variable are discussed along with contour integrals and differential equations with regular and irregular singularities The Liouville Green approximation is also considered Comprised of seven chapters this volume begins with an overview of the basic concepts and definitions of asymptotic analysis and special functions followed by a discussion on integrals of a real variable Contour integrals are then examined paying particular attention to Laplace integrals with a complex parameter and Bessel functions of large argument and order Subsequent chapters focus on differential equations having regular and irregular singularities with emphasis on Legendre functions as well as Bessel and confluent hypergeometric functions A chapter devoted to the Liouville Green approximation tackles asymptotic properties with respect to parameters and to the independent variable eigenvalue problems and theorems on singular integral equations This monograph is intended for students needing only an introductory course to asymptotics and special functions
