Christian,2005-08-19 Risk and reliability analysis is an area of growing importance in geotechnical engineering where many variables have to be considered Statistics reliability modeling and engineering judgement are employed together to develop risk and decision analyses for civil engineering systems The resulting engineering models are used to make probabilistic predictions which are applied to geotechnical problems Reliability Statistics in Geotechnical Engineering comprehensively covers the subject of risk and reliability in both practical and research terms Includes extensive use of case studies Presents topics not covered elsewhere spatial variability and stochastic properties of geological materials No comparable texts available Practicing engineers will find this an essential resource as will graduates in geotechnical engineering programmes *Performance Confirmation of Constructed Geotechnical Facilities* A. Berk,2020-06-29 This textbook considers statistical learning applications when interest centers on the conditional distribution of a response variable given a set of

predictors and in the absence of a credible model that can be specified before the data analysis begins. Consistent with modern data analytics, it emphasizes that a proper statistical learning data analysis depends in an integrated fashion on sound data collection, intelligent data management, appropriate statistical procedures, and an accessible interpretation of results. The unifying theme is that supervised learning properly can be seen as a form of regression analysis. Key concepts and procedures are illustrated with a large number of real applications and their associated code in R, with an eye toward practical implications. The growing integration of computer science and statistics is well represented, including the occasional but salient tensions that result. Throughout, there are links to the big picture. The third edition considers significant advances in recent years, among which are the development of overarching conceptual frameworks for statistical learning, the impact of big data on statistical learning, the nature and consequences of post-model selection statistical inference, deep learning in various forms, the special challenges to statistical inference posed by statistical learning, the fundamental connections between data collection and data analysis, interdisciplinary ethical and political issues surrounding the application of algorithmic methods in a wide variety of fields, each linked to concerns about transparency, fairness, and accuracy. This edition features new sections on accuracy, transparency, and fairness, as well as a new chapter on deep learning. Precursors to deep learning get an expanded treatment. The connections between fitting and forecasting are considered in greater depth. Discussion of the estimation targets for algorithmic methods is revised and expanded throughout to reflect the latest research. Resampling procedures are emphasized. The material is written for upper undergraduate and graduate students in the social, psychological, and life sciences, and for researchers who want to apply statistical learning procedures to scientific and policy problems.

See How They Run Joseph Steranka, 2023-06-28. The process taken to develop a key horse procedure KHP that leads to the selection of winners in more than 50 percent of their thoroughbred horse races is described. The procedure is objective and requires no special knowledge about horse racing, trainers, jockeys, breeding, weights, etc. The KHP contains multiple methods for defining the winning horse in a race. Statistical tests with a confidence level of over 95 percent yield results showing the key horses win in a range of 51 to 63 percent, with a return on investment ROI in a range of 26 to 34 percent.
