 François Bergeron, Gilbert Labelle, Pierre Leroux, 1998 The combinatorial theory of species introduced by Joyal in 1980
 provides a unified understanding of the use of generating functions for both labelled and unlabelled structures and as a tool
 for the specification and analysis of these structures Of particular importance is their capacity to transform recursive
 definitions of tree like structures into functional or differential equations and vice versa The goal of this book is to present
 the basic elements of the theory and to give a unified account of its developments and applications It offers a modern
 introduction to the use of various generating functions with applications to graphical enumeration Polya theory and analysis
 of data structures in computer science and to other areas such as special functions functional equations asymptotic analysis
 and differential equations This book will be a valuable reference to graduate students and researchers in combinatorics
 analysis and theoretical computer science **The British National Bibliography** Arthur James Wells, 2006 **Integer**
