

WORKSHOP MANUAL BULLET

PRIMARY CHAIN ADJUSTMENT

The chain should be adjusted so that there is 1/4" up and down movement at the centre of the top run of the chain. Remember to check the chain tension at 3 or 4 places and then adjust accordingly. Ensure that the chain tensioner pad moves freely and the lock nut of the adjuster is retightened after carrying out the adjustment. The chain is to be renewed if its length has increased by 3/4" than the length of a new chain.

After replacing the chain cover, remember to replenish the chaincase with oil (SAE 20) up to the level plug in outer chain case (approx. quantity 430 to 450 ml.)

14. Adjustment of the Clutch control

It is essential that there should be about 3 to 4mm free movement in the clutch cable, to ensure that all the spring pressure is exerted on the plates.

There are 2 points of adjustment on the clutch cable. The first is the midway adjuster at the middle of the cable just above the chain case. The adjustment is made by screwing the adjuster screw in or out of the adjuster body. Tighten the locknut on the screwed collar after adjustment has been made.

CLUTCH ADJUSTMENT ON GEARBOX

The other point is at the handle bar end. Loosen the lock nut and thread in the adjuster to increase play and vice versa to reduce play. Tighten lock nut after carrying out adjustment. However if the adjusters have reached their maximum position then the adjustment can be carried out in the gear box outer cover. Before proceeding on the adjustment, turn in both cable adjusters to their fully closed position (fully in position).

To make the adjustment, remove the inspection cover, slacken the locknut and turn the central screw in, to get the desired free play on the clutch lever at the handle bar end. Tighten the locknut after adjustment has been made.
