types of rock and the geologic processes that produce the soils is discussed On a macro scale it seeks to discover the origin of the Earth of mountains valleys glaciers rocks volcanoes and a myriad number of other phenomena Plate tectonics continental drift and subduction zones all played a role in the formation of our planet On the micro scale geology seeks to understand fluid flow through small pores and fractures The fate and transport of chemicals through soils and especially through bedrock is a function of the geology The rock structure and its understanding of the geologic processes which produce fractures and allows fluid flow is a major factor in remediation design
