that will meet product performance requirements at the lowest cost. Many of the processing variables and their behaviors in the different processes are the same as they all involve basic conditions of temperature, time, and pressure. The book begins with information applicable to all processes on topics such as melt softening, flow, and controls. All processes fit into an overall scheme that requires the interaction and proper control of systems. Individual processes are reviewed to show the effects of changing different variables to meet the goal of zero defects. The content is arranged to provide a natural progression from simple to complex situations which range from control of a single manual machine to simulation of sophisticated computerized processes that interface with many different processing functions.
