

IV dose and infusion rates for all 3 indications

INDICATION	DOSE	INITIAL INFUSION RATE	MAINTENANCE INFUSION RATE (IF COLLOIDATED)
CIDP	Loading dose: 2 g/kg Maintenance dose: 1 g/kg	2 mg/kg/min (0.02 mL/kg/min)	0 mg/kg/min (0.06 mL/kg/min) Entry 2 weeks
POD	300-600 mg/kg	1 mg/kg/min (0.01 mL/kg/min)	0 mg/kg/min (0.06 mL/kg/min) Entry 2 weeks
ITP	2 g/kg	1 mg/kg/min (0.01 mL/kg/min)	0 mg/kg/min (0.06 mL/kg/min)

It is recommended that the initial infusion rate be used for the first 30 minutes. If well tolerated, the rate may be gradually increased to a maximum of 0.06 mL/kg per minute (0.6 mg/kg/min).
Certain severe adverse drug reactions may be related to the rate of infusion. Slowing or stopping the infusion usually allows the symptoms to disappear promptly. Ensure that patients with preexisting renal insufficiency are not volume depleted. Discontinue if renal function deteriorates.
For patients at risk of renal dysfunction or thromboembolic events, administer at the minimum infusion rate practicable.

A versatile IG treatment with 3 FDA-approved indications¹

Please see inside for Important Safety Information for GAMUNEX-C (Immune globulin injection [human], 10% caprylate/chromatography purified) and refer to accompanying full Prescribing Information for complete prescribing details.

Important Safety Information

GAMUNEX-C (Immune globulin injection [human], 10% caprylate/chromatography purified) is indicated for the treatment of primary humoral immunodeficiency disease (PID) in patients 2 years of age and older, idiopathic thrombocytopenic purpura (ITP), and chronic inflammatory demyelinating polyneuropathy (CIDP).

Risk factors may include: advanced age, prolonged immobilization, hypercoagulable conditions, history of venous or arterial thrombosis, use of estrogens, indwelling central venous catheters, hyperviscosity, and cardiovascular risk factors. Thrombosis may occur in the absence of known risk factors. For patients at risk of thrombosis, administer GAMUNEX-C at the minimum dose and infusion rate practicable. Ensure adequate hydration in patients administered. Monitor for signs and symptoms of thrombosis and assess blood viscosity in patients at risk for hyperviscosity.
Renal dysfunction, acute renal failure, hemolytic uremia, and death have occurred with immune globulin intravenous (IVIg) products in predisposed patients. Patients predisposed to renal dysfunction include those with age, sex, dehydration, sepsis, hypovolemia, or patients receiving known nephrotoxic drugs. Renal dysfunction and acute renal failure occur more commonly in patients receiving IVIg and contain sodium. GAMUNEX-C does not contain sodium. For patients at risk of renal dysfunction or failure, administer GAMUNEX-C at the minimum concentration available and the minimum infusion rate practicable.

GAMUNEX-C is contraindicated in patients who have had an anaphylactic or severe systemic reaction to the administration of human immune globulin. It is contraindicated in IgA-deficient patients with antibodies against IgA and history of hypersensitivity. Severe hypersensitivity reactions may occur with IVIg products, including GAMUNEX-C. In case of hypersensitivity, discontinue GAMUNEX-C infusion immediately and institute appropriate treatment.
Monitor renal function, including blood urea nitrogen (BUN), serum creatinine, and urine output in patients at risk of developing acute renal dysfunction. Hypertension, increased serum viscosity, and hypohematocrit may occur in patients receiving IVIg treatment, including GAMUNEX-C.
There have been reports of noncardiogenic pulmonary edema (nonfusion-related acute lung injury [TRALI]), febrile reaction, and aseptic meningitis in patients administered with IVIg, including GAMUNEX-C.

The high-dose regimen (1g/kg x 1-2 days) is not recommended for individuals with expanded fluid volumes or where fluid volume may be a concern.
Because GAMUNEX-C is made from human blood, it may carry a risk of transmitting infectious agents, e.g., viruses, the variant Creutzfeldt-Jakob disease (vCJD) agent, and theoretically the Chikungunya virus (CHIKV) agent.
Do not administer GAMUNEX-C subcutaneously in patients with ITP because of the risk of hematomas formation.
Periodic monitoring of renal function and urine output is particularly important in patients judged to be at increased risk of developing acute renal failure. Assess renal function, including measurement of BUN and serum creatinine, before the initial infusion of GAMUNEX-C and at appropriate intervals thereafter.
Consider baseline assessment of blood viscosity in patients at risk for hyperviscosity, including those with cryoglobulins, fasting chylomicronemia, markedly high triglycerides (triglycerides), or monoclonal gammopathies, because of the potentially increased risk of thrombosis.
If bleeding or symptoms of hemolysis are present after an infusion of GAMUNEX-C, perform appropriate laboratory testing for confirmation.
If TRALI is suspected, perform appropriate tests for the presence of antineutrophil antibodies and anti-PLA₂ antibodies in both the product and patient's serum.
After infusion of IgG, the transfusing rate of the various passively transferred antibodies in the patient's blood may yield positive serological testing results, with the potential for misleading interpretation.
In clinical studies, the most common adverse reactions with GAMUNEX-C were headache, fever, chills, hypertension, rash, nausea, and arthralgia. In CIDP, headache, chills, fever, chills, hypertension, rash, nausea, and arthralgia were also seen. In ITP and POD, the most common adverse reactions were headache, fever, chills, arthralgia, and back pain. In ITP, the most common adverse reactions were headache, fever, chills, and rash (in ITP).
The most serious adverse reactions in clinical studies were pulmonary embolism (PE) in 1 subject with a history of PE on CIDP, an exacerbation of autoimmune pure red cell aplasia in 1 subject on POD, and myocarditis in 1 subject that occurred 50 days post-drug infusion and was not considered drug related on ITP.
Please see accompanying GAMUNEX-C full Prescribing Information for complete prescribing details.
