Munter, Nicholas Van der Kreek, 2011 Structural steel connections Bolts and bolting Cold-formed Tubular Members and Connections Greg Hancock, Tim J Wilkinson, Xiao-Ling Zhao, 2005-08-17 Cold formed structural members are being used more widely in routine structural design as the world steel industry moves from the production of hot rolled section and plate to coil and strip often with galvanised and or painted coatings Steel in this form is more easily delivered from the steel mill to the manufacturing plant where it is usually cold rolled into open and closed section members This book not only summarises the research performed to date on cold form tubular members and connections but also compares design rules in various standards and provides practical design examples *Guide to the Addition Severity Index*, 1985 Design Guide for Concrete-filled Double Skin Steel Tubular Structures Lin-Hai Han, Dennis Lam, David Nethercot, 2018-10-12 This is the first design guide on concrete filled double skin steel tubular CFDST structures It addresses in particular CFDST structures with plain concrete sandwiched between circular hollow sections and provides the relevant calculation methods and construction provisions for CFDST structures These inherit the advantages of conventional concrete filled steel tubular CFST structures including high strength good ductility and durability high fire resistance and favourable constructability Moreover because of their unique sectional configuration CFDST structures have been proved to possess lighter weight higher bending stiffness and better cyclic performance than conventional CFST Consequently CFDST can offer reduced concrete consumption and construction costs This design guide is for engineers designing electrical grid infrastructures wind power towers bridge piers and other structures requiring light self weight high bending stiffness and high bearing capacity **Tubular Structures XIII** Ben Young, 2010-11-12 Tubular Structures XIII contains the latest scientific and engineering developments in the field of tubular steel structures as presented at the 13th International Symposium on Tubular Structures ISTS13 Hong Kong 15 17 December 2010 The International Symposium on Tubular Structures ISTS has a longstanding reputation for being the principal showcase for manufactured tubing and the prime international forum for discussion of research developments and applications in this field The Symposium presentations herein include one invited ISTS Kurobane Lecture together with all the technical papers Various key and emerging subjects in the field of hollow structural sections are covered such as special applications and case studies static and fatigue behaviour of connections joints concrete filled and composite tubular members and offshore structures stainless steel and aluminium structures earthquake and dynamic resistance specification and standard developments material properties and structural reliability impact resistance and brittle fracture fire resistance casting and fabrication innovations Research and development issues presented in this book are applicable to buildings bridges offshore structures entertainment rides cranes towers and various mechanical and agricultural equipment Tubular Structures XIII is thus a pertinent reference source for architects civil and mechanical engineers designers steel

Embedded systems are usually composed of several interacting components such as custom or application specific processors ASICs memory blocks and the associated communication infrastructure The development of tools to support the design of such systems requires a further step from high level synthesis towards a higher abstraction level The lack of design tools accepting a system level specification of a complete system which may include both hardware and software components is one of the major bottlenecks in the design of embedded systems Thus more and more research efforts have been spent on issues related to system level synthesis This book addresses the two most active research areas of design automation today high level synthesis and system level synthesis In particular a transformational approach to synthesis from VHDL specifications is described System Synthesis with VHDL provides a coherent view of system synthesis which includes the high level and the system level synthesis tasks VHDL is used as a specification language and several issues concerning the use of VHDL for high level and system level synthesis are discussed These include aspects from the compilation of VHDL into an internal design representation to the synthesis of systems specified as interacting VHDL processes The book emphasizes the use of a transformational approach to system synthesis A Petri net based design representation is rigorously defined and used throughout the book as a basic vehicle for illustration of transformations and other design concepts Iterative improvement heuristics such as tabu search simulated annealing and genetic algorithms are discussed and illustrated as strategies which are used to guide the optimization process in a transformation based design environment Advanced topics including hardware software partitioning test synthesis and low power synthesis are discussed from the perspective of a transformational approach to system synthesis System Synthesis with VHDL can be used for advanced undergraduate or graduate courses in the area of design automation and more specifically of high level and system level synthesis At the same time the book is intended for CAD developers and researchers as well as industrial designers of digital systems who are interested in new algorithms and techniques supporting modern design tools and methodologies
