

Aspen Custom Modeler enables users to quickly create custom models to incorporate their companies' unique expertise and knowledge, enabling them to fully leverage the benefits of process simulation throughout their company.

The Challenge: High Total Cost of Custom Models

Aspen Technology's simulation tools, such as Aspen Plus®, HYSYS®, and Aspen Dynamics®, include comprehensive unit operation model libraries that have been used to successfully simulate thousands of processes. While these models provide significant value, they cannot always capture proprietary company knowledge or the latest published innovations.

Custom models have traditionally been developed using standard programming languages, such as Microsoft Visual Basic™, C++ or FORTRAN. Not only can this be very time consuming, but it also carries a high risk of failure, due to the expertise required in programming, numerical methods and process modeling. The outcome is a high cost for development and maintenance, with companies being reluctant to develop new models.

Given increasing global competition and the increasing rate of innovation, how can engineers quickly and easily capture, create and test new process models to fully leverage company knowledge and expertise without generating difficult-to-maintain programs?

The Opportunity: Fully Leveraging Company Knowledge and Expertise

A key source of sustainable competitive advantage comes from rapidly using company knowledge and expertise, as well as external innovations. To do this, companies must have a common and consistent framework for creating, sharing and re-using custom models. A common modeling tool that promotes cooperation and the easy evaluation of new ideas can help shorten the innovation cycle, and enables users to fully leverage the benefits of process simulation throughout their company.

Further, this helps to ensure consistency of custom model development and deployment provides users with faster access to the latest innovations and reduces total cost of ownership for custom models. Other business benefits of using a common modeling tool to capture the latest innovations include reduced time to market and lower capital costs, improved safety and environmental compliance and higher profitability from more optimal operation.

"Aspen Custom Modeler provides an easy-to-use environment for both capturing and validating our process knowledge. As a standard modeling tool it also gives us a common language for sharing and exporting this knowledge across our enterprise."
