

ASTB Personal Study Guide

MATH SKILLS:

- 16 ounces = 1 pound
- 8 pints = 1 gallon
- 4 quarts = 1 gallon
- 2000 lbs = 1 ton
- Shapes
 - $(\# \text{ of sides} - 2) \times 180 = \text{Total } \# \text{ of degrees}$
 - Supplemental angle - add up to 180 degrees
 - Complementary angle - add up to 90 degrees
- Words to Equations:
 - If 2 times r exceeds one-half of t by 5, which of the following represents the relationship between r and t .
 - $2r - .5t = 5$
 - or.. $4r - t = 10$
 - If 3 times x exceeds $1/3$ of y by 9, which of the following is the equation that shows the relationship between x and y ?
 - $3x - 1/3 \cdot y = 9$
 - or.. $9x - y = 27$
- Questions about how fast people can do a job together
 - Time actually needed / Time needed to do the job alone = 1
 - Ex. One recruiter can complete a certain assignment in 40 minutes; another can complete the same assignment in one hour. How long would it take to complete the assignment if they worked together?
 - $x/40 + x/60 = 1$, $x=24$ minutes
- Question with an acid solution. Take the pure acid volume as X .
 - $P1 \cdot V1 + P2 \cdot V2 = P3 \cdot V3$
 - $P1 \cdot V1$ would be $X \cdot 1$
 - $P2 \cdot V2$ is volume of first * percentage of first
 - $P3 \cdot V3 = (X + \text{volume of first solution}) \cdot \text{volume of final}$
 - solve for X
 - Example: How much pure acid must be added to 12 ounces of a 40% acid solution in order to produce a 60% acid solution?
 - $100x + 480 = 60(12+x)$, $x=6$
- A can complete a project in 20 days and B can complete the same project in 30 days. If A and B start working on the project together and A quits 10 days before the project is completed, in how many days will the project be completed?
 - Explanatory Answer If A can do complete a project in 20 days, then A will complete $1/20$ th of the project in a day. Similarly, B will complete $1/30$ th of the project in a day. Let the total number of days taken to complete the project be x days. Then, B would have worked for all x days, while A would have worked for $(x - 10)$ days. Therefore, A would have completed $\frac{x-10}{20}$ th of the project and B would have complete $\frac{x}{30}$ th of the project. $\frac{x-10}{20} + \frac{x}{30} = 1$; Solving for x , we get $x = 18$.
- Questions about discount price
 - Amount of discount / Original price = % of reduction
 - reduction * 100 = final answer %
- When you divide by a decimal, make it a whole number and move the dividend's decimal the same amount. Don't change the decimal in the final answer.
- A businesswoman spends $1/5$ of her income for rent, and $3/8$ of the remainder goes towards salary.
