

- Unscrew bolts (left and right) arrows from cover panel -1-

- Unscrew bolts arrows and take off cover for electronics box.

WARNING

The pump valve unit for heating system (part of fuel air bleed line) gets very hot - hot oil burner!

- Carefully lever out the retaining strap -3- using a screwdriver (arrows 1 and 2) and remove the engine control unit from the electronics box.

To help prevent unauthorized access to the connectors on the engine control unit, the control unit is secured by means of shear bolts to a locking plate and a metal casing.

The threads of the two shear bolts -1- which are not screwed into the engine control unit are secured with locking fluid. To unscrew these bolts, the threads must therefore be heated with the hot air blower.

The threads of the two shear bolts -2- which are screwed into the engine control unit are not secured with locking fluid. Do not apply heat to the threads in the control unit housing. This is not necessary and would cause overheating of the control unit.

- Select settings on hot air blower as shown in illustration. i.e. set temperature potentiometer -2- to maximum heat output and two-stage air flow switch -3- to position 2.

WARNING

Heating the thread of the locking plate also heats up the shear bolts and parts of the metal housing. Take care to avoid burns. It is also important to ensure that only the thread is heated and none of the surrounding components if at all possible. These should be covered if necessary.

- Apply heat to the threads of the shear bolts -1- for approx. 20 to 30 seconds.
- Unscrew shear bolts using straight pull.
- The two shear bolts screwed into the control unit do not need to be heated. They can be removed without heating.
- Detach metal housing plate from control unit connectors.

Prevent unauthorized access to the connectors on the engine control unit by means of a metal casing. The casing is secured by means of shear bolts to a locking plate and a metal casing. The threads of the two shear bolts -1- which are not screwed into the engine control unit are secured with locking fluid. To unscrew these bolts, the threads must therefore be heated with the hot air blower.

- Release connectors -4- on engine control unit and unplug connectors.
- Take out old engine control unit -ECU- and install new engine control unit -ECU-.

Installation

Installation is performed in the reverse sequence.

- Make sure you fit metal casing back on engine control unit.
- Always use new shear bolts.
- Clean threaded holes for new shear bolts to remove any residue from locking fluid. This can be done using a thread tap.

The procedure required after connecting the new engine control unit is described in the Custom Tool-Setting or Custom Tool-Setting.

- Enter correct vehicle identification in Custom Fault-Finding.
- Press "Go to".
- Press "Function/component selection".
- Select "Drive train".
- Select "Engine code letters".
- 01 - Self-diagnose compatible systems
- "Monitor injection and ignition system"
- Select "Functions, engine".
- Select "Replacing engine control unit".

1.12 Removing and installing air mass meter

Removal

- Unplug electrical connector from air mass meter -G75- 2-
