

Example

$$A = \begin{bmatrix} 3 & 1 \\ 0 & 3 \end{bmatrix}$$

Triangular Matrix

Only has 1
eigenvalue!

$$\det(A - \lambda I)$$

$$= \begin{vmatrix} 3-\lambda & 1 \\ 0 & 3-\lambda \end{vmatrix}$$

$$= (3-\lambda)^2 - 1 \cdot 0$$

$$= (3-\lambda)^2$$

$$\therefore \lambda_1 = \lambda_2 = 3$$

An Introduction To Linear Algebra Eigenvector

Serge Lang

An Introduction To Linear Algebra Eigenvector:

Introduction to Linear and Matrix Algebra Nathaniel Johnston, 2021-05-19 This textbook emphasizes the interplay between algebra and geometry to motivate the study of linear algebra. Matrices and linear transformations are presented as two sides of the same coin with their connection motivating inquiry throughout the book. By focusing on this interface the author offers a conceptual appreciation of the mathematics that is at the heart of further theory and applications. Those continuing to a second course in linear algebra will appreciate the companion volume *Advanced Linear and Matrix Algebra*. Starting with an introduction to vectors, matrices and linear transformations, the book focuses on building a geometric intuition of what these tools represent. Linear systems offer a powerful application of the ideas seen so far and lead onto the introduction of subspaces, linear independence, bases and rank. Investigation then focuses on the algebraic properties of matrices that illuminate the geometry of the linear transformations that they represent. Determinants, eigenvalues and eigenvectors all benefit from this geometric viewpoint. Throughout, Extra Topic sections augment the core content with a wide range of ideas and applications from linear programming to power iteration and linear recurrence relations. Exercises of all levels accompany each section, including many designed to be tackled using computer software. *Introduction to Linear and Matrix Algebra* is ideal for an introductory proof-based linear algebra course. The engaging color presentation and frequent marginal notes showcase the author's visual approach. Students are assumed to have completed one or two university-level mathematics courses though calculus is not an explicit requirement. Instructors will appreciate the ample opportunities to choose topics that align with the needs of each classroom and the online homework sets that are available through WeBWorK.

Introduction to Linear Algebra Serge Lang, 2012-12-06 This is a short text in linear algebra intended for a one-term course. In the first chapter, Lang discusses the relation between the geometry and the algebra underlying the subject and gives concrete examples of the notions which appear later in the book. He then starts with a discussion of linear equations, matrices and Gaussian elimination and proceeds to discuss vector spaces, linear maps, scalar products, determinants and eigenvalues. The book contains a large number of exercises, some of the routine computational type while others are conceptual.
