Protein Instability at Interfaces During Drug Product Development Jinjiang Li, Mary E. Krause, Raymond Tu, 2021-02-12 Proteins are exposed to various interfacial stresses during drug product development They are subjected to air liquid liquid liquid solid and sometimes liquid liquid interfaces throughout the development cycle from manufacturing of drug substances to storage and drug delivery Unlike small molecule drugs proteins are typically unstable at interfaces where on adsorption they often denature and form aggregates resulting in loss of efficacy and potential immunogenicity This book covers both the fundamental aspects of proteins at interfaces and the quantification of interfacial behaviors of proteins Importantly this book introduces the industrial aspects of protein instabilities at interfaces including the processes that introduce new interfaces evaluation of interfacial instabilities and mitigation strategies The audience that this book targets encompasses scientists in the pharmaceutical and biotech industry as well as faculty and students from academia in the surface science pharmaceutical and medicinal chemistry areas

Advances in Contact Angle, Wettability

and Adhesion, Volume 2 K. L. Mittal, 2015-09-18 This book is the second volume in the series Contact Angle Wettability and Adhesion The premier volume was published in 2013 Even a cursory glance at the literature show that in recent years the interest in understanding and controlling wetting behavior has grown exponentially Currently there is tremendous research activity in rendering surfaces superhydrophobic superhydrophilic superoleophobic superoleophilic omniphobic and omniphilic because of their applications in many technologically important fields Also the durability or robustness of materials with such super characteristics is extremely significant as well as the utilization of green biobased materials to obtain such surfaces This book containing 19 articles reflects more recent developments in certain areas covered in its predecessor volume as well as it includes some topics which were not covered before Concomitantly this book provides a medium to keep abreast of the latest research activity and developments in the arena of contact angle wettability and adhesion The topics discussed include Understanding of wetting hysteresis fabrication of superhydrophobic materials plasma treatment to achieve superhydrophilic surfaces highly liquid repellent textiles modification of paper surfaces to control liquid wetting and adhesion Cheerios effect and its control engineering materials with superwettability laser ablation to create micro nano patterned surfaces liquid repellent amorphous carbon nanoparticle networks mechanical durability of liquid repellent surfaces wetting of solid walls and spontaneous capillary flow relationship between roughness and oleophilicity superhydrophobic and superoleophobic green materials computational analysis of wetting on hydrophobic surfaces application to self cleaning mechanisms bubble adhesion to superhydrophilic surfaces surface free energy of superhydrophobic materials and role of surface free energy in pharmaceutical tablet tensile strength
