Blue Urbanism Exploring Connections Between Cities And Oceans:

Blue Urbanism Timothy Beatley, 2014-07-08 What would it mean to live in cities designed to foster feelings of connectedness to the ocean As coastal cities begin planning for climate change and rising sea levels author Timothy Beatley sees opportunities for rethinking the relationship between urban development and the ocean Modern society is more dependent upon ocean resources than people are commonly aware of from oil and gas extraction to wind energy to the vast amounts of fish harvested globally to medicinal compounds derived from sea creatures and more In *Blue Urbanism* Beatley argues that given all we've gained from the sea city policies plans and daily urban life should acknowledge and support a healthy ocean environment The book explores issues ranging from urban design and land use to resource extraction and renewable energy to educating urbanites about the wonders of marine life Beatley looks at how emerging practices like community supported fisheries and aquaponics can provide a sustainable alternative to industrial fishing practices Other chapters delve into incentives for increasing use of wind and tidal energy as renewable options to oil and gas extraction that damages ocean life and how the shipping industry is becoming more green Additionally urban citizens he explains have many opportunities to interact meaningfully with the ocean from beach cleanups to helping scientists gather data While no one city has it all figured out Beatley finds evidence of a changing ethic in cities around the world a marine biodiversity census in Singapore decreasing support for shark finning in Hong Kong water plazas in Rotterdam a new protected area along the rocky shore of Wellington New Zealand bluebelt planning in Staten Island and more Ultimately he explains we must create a culture of ocean literacy using a variety of approaches from building design and art installations that draw inspiration from marine forms to encouraging citizen volunteerism related to oceans to city sponsored research and support for new laws that protect marine health Equal parts inspiration and practical advice for urban planners ocean activists and policymakers *Blue Urbanism* offers a comprehensive look at the challenges and great potential for urban areas to integrate ocean health into their policy and planning goals

Haugan,2023-05-24 Home to over 80 percent of all life on Earth the ocean is the world s largest carbon sink and a key source of food and economic security for billions of people The relevance of the ocean for humanity s future is undisputed However the ocean s great potential to drive economic growth and equitable job creation sustain healthy ecosystems and mitigate climate change is not yet fully recognised Lack of awareness of this potential as well as management and governance challenges pose impediments Until these impediments are removed ocean ecosystems will continue to be degraded and opportunities for people lost A transition and a clear path to a thriving and vibrant relationship between humans and the ocean are urgently needed This open access collection of papers and reports identifies a path that is inspired by science energised by engaged people and emboldened by visionary leaders These assessments of knowledge are commissioned by the High Level Panel for a Sustainable Ocean Economy Ocean Panel which was established in September 2018 as a unique initiative led by heads of state and government from around the world to showcase the latest leading edge science knowledge and state of the art thinking on key ocean issues Altogether The Blue Compendium offers innovative ocean solutions in technology policy governance and finance realms that could help accelerate a transition to a more sustainable and prosperous relationship with the ocean The comprehensive assessments have already informed policy making at the highest levels of government and motivated an impressive array of responsive and ambitious action across a growing network of leaders in business finance and civil society *Human-Nature Interactions* Ieva Misiune,Daniel Depellegrin,Lukas Egarter

Vigl,2022-06-30 This edited volume aims to widen the discussion about the diversity of human nature relationships and valuation methods and to stimulate new perspective that are needed to build a more sustainable future especially in face of ongoing socio environmental changes Conceptual and empirical approaches including qualitative quantitative and mixed methodologies have been used to highlight the importance of an integrative understanding of socio ecological systems where healthy ecosystems underpin the quality of life and societal activities largely drive environmental changes Readers will obtain a comprehensive overview of the many and diverse ways the relationships between people and nature can be characterized This includes understanding how people assign values to nature discuss how human nature interactions are shaped and provide examples of how these values and interactions can be systematically assessed across different land systems in Europe and beyond This open access book is produced by internationally recognized scientists in the field but written in an accessible format to be of interest to a large audience including prospective students lecturers young professionals and scientists embarking to the interdisciplinary field of socio ecological research and environmental valuation *from URBAN DESIGN to LANDSCAPE URBANISM* Sariyya ARSLAN,Erkan POLAT,2025-04-16 Landscape Urbanism is a planning and design theory and a model of practice that argues that the best way to organize cities is through the design of the city s landscape rather than just the design of built or unbuilt areas In this context it is positioned within larger scale cultural historical and theoretical formations Landscape Urbanism is a response to the limited perception or depiction of the current

project and site context by both Urban Planners and Architects and Landscape Architects It is also a concept that has been strategically introduced by these design and planning oriented professions and jobs especially in terms of Urban Design as a way to differentiate the context and is used more in a Western oriented way and has been put forward as a response to the increasingly undefined role that Landscape Architects find themselves in Landscape Urbanism describes the ability to produce urban effects that have traditionally been achieved through the construction of buildings on built up areas simply through the organization of horizontal surfaces Although first coined in the mid 1990s the term Landscape Urbanism has adopted many different uses but is most often associated with Urban Design and as a Postmodernist or even New Modernist response to the spatial scale failures of the New Urbanism the departure from comprehensive visions and demands for Modern architecture and Urban Planning

The Urbanism of Exception Martin J. Murray, 2017-03-10 This book challenges the conventional modernist inspired understanding of urbanization as a universal process tied to the ideal typical model of the modern metropolis with its origins in the grand Western experience of city building At the start of the twenty first century the familiar idea of the city or urbanism as we know it has experienced such profound mutations in both structure and form that the customary epistemological categories and prevailing conceptual frameworks that predominate in conventional urban theory are no longer capable of explaining the evolving patterns of city making Global urbanism has increasingly taken shape as vast distended city regions where urbanizing landscapes are increasingly fragmented into discontinuous assemblages of enclosed enclaves characterized by global connectivity and concentrated wealth on the one side and distressed zones of neglect and impoverishment on the other These emergent patterns of what might be called enclave urbanism have gone hand in hand with the new modes of urban governance where the crystallization of privatized regulatory regimes has effectively shielded wealthy enclaves from public oversight and interference

Amphibious Concepts at the Edge of the Sea Joerg Baumeister, Ioana C. Giurgiu, Daniela A. Ottmann, 2025-02-14 This book explores interfaces between land and sea and their geostrategic ecological urban productive indigenous legal historical and artistic dimensions The oceans comprising two thirds of the earth's surface were initially utilised mainly for transportation and fishing Today they serve diverse purposes such as supplying energy freshwater mineral resources supporting leisure activities and providing habitat Additionally the UN set up the first international agreement establishing Marine Protection Areas for a third of the sea to mitigate the growing use and exploitation The more interest in oceans territories increases the more the question arises about the beneficial evolution of their physical and legal boundaries What innovative amphibious concepts can be developed for the edge of the sea The book pushes the boundaries of current knowledge to provide a deeper insight into the upcoming challenges and opportunities making it easier to apply the best strategies for a healthy future for both the ocean and humanity

Nature Driven Urbanism Rob Roggema, 2019-10-03 This book discusses the way that a nature driven approach to urbanism can be applied at each of the urban scales architectural design urban design of

neighborhoods city planning and landscape architecture and at the city and regional scales At all levels nature driven approaches to design and planning add to the quality of the built structure and furthermore to the quality of life experienced by people living in these environments To include nature and greening to built structures is a good starting point and can add much value The chapter authors have fiducia in giving nature a fundamental role as an integrated network in city design or to make nature the entrance point of the design process and base the design on the needs and qualities of nature itself The highest existence of nature is a permanent ecosystem which endures stressors and circumstances for a prolonged period In an urban context this is not always possible and temporality is an interesting concept explored when nature is not a permanent feature The ecological contribution to the environment and indirect dispersion of species from a temporary location will overall add biodiversity to the entire system

Nichols, 2024-12-03 The 10th anniversary edition of the landmark book on the remarkable effects of water on our health and well being A decade ago marine biologist Dr Wallace J Nichols revolutionized how we think about our connection to water exploring the questions we've long lacked answers to Why are we drawn to lakes rivers oceans beaches and pools each summer Why does being near water set our minds and bodies at ease boost creativity enhance wellness and increase longevity Over the past several years Blue Mind has become the ultimate resource on the remarkable benefits of being near in on or under water Combining cutting edge neuroscience psychology and cross disciplinary data with compelling personal stories from top athletes leading scientists military veterans and gifted artists Nichols shows how proximity to water can improve performance increase calm diminish anxiety and increase professional success Now with updated science backed research examples of innovative practitioners and a new afterword on the far reaching impact of this groundbreaking book Blue Mind not only illustrates the crucial importance of our connection to water it provides a paradigm shifting blueprint for a movement to create better lives for everyone on this Blue Marble we call home

Coastal Urbanities, 2022-10-24 This volume explores how the city and the sea converse and converge in creating new forms of everyday urbanity in archipelagic and island Southeast Asia Drawing inspiration from case studies spanning Indonesia the Philippines Singapore and New Caledonia the volume rethinks the place of the sea in coastal cities through a mobility inspired understanding of urbanity itself How might conceptualisations of contemporary coastal urbanisms be approached from the sea in ways that complicate singularly terrestrial fixed framings of the city What connections contradictions and dissonances can be found between sea change and urban change While addressing these questions the authors re-centre more marginal voices of those who dwell and work in islanded metropolises offering new insights on the futures and contested nature of littoral urban transformation
