Amyotrophic Lateral Sclerosis And The Frontotemporal Dementias:

Amyotrophic Lateral Sclerosis and the Frontotemporal Dementias Michael J. Strong, 2012-10-11 Over the past ten years there has been an increasing recognition that syndromes of frontotemporal dysfunction FTD are a common occurrence in patients with amyotrophic lateral sclerosis ALS Such syndromes may be present in as many as 60% of patients with ALS Conversely the occurrence of motor neuron dysfunction in patients with clinically pure frontotemporal dementia is increasingly recognized This suggests that to some extent there are overlapping syndromes in which both ALS and FTD occur within the same individual This volume summarizes the advances in our understanding of these two disorders as well as the potential relationship between the two Key topics include advances in our ability to clinically describe the frontotemporal syndromes preclinical detection neuroimaging and genetics The exploding field of new markers in neuropathology is examined as is the role of new genetic mutations in DNA RNA transport systems This book is the essential reference text for this topic and will be of interest to neurologists and neurological trainees with a clinical or research interest in the FTDs or ALS neuropsychologists neuropathologists and researchers

Oxytocin in Brain Health and Disease: How can it exert such pleiotropic neuromodulatory effects? Francesca Talpo, Navjot Kaur, Gerardo Rosario Biella, 2023-06-08 Oxytocin is a pituitary hormone able to produce a multitude of heterogeneous central and peripheral responses Within the central nervous system oxytocin is synthesized by the hypothalamic parvocellular neurons and released in many different brain areas where it acts as a neuromodulator It exerts pro social and anxiolytic effects by promoting attachment trust maternal bonding social affiliation and eating and metabolic functions Imbalances in the oxytocinergic system are implicated in neuropsychiatric diseases associated with altered socio emotional competence such as autism spectrum disorder clinical depression and eating disorders Also oxytocin impairments could affect memory formation persistence and they have been found in some neurodegenerative diseases such as Alzheimer's disease and in several cancers Although substantial progress has been achieved in understanding single pieces of the complex neurobiology of the oxytocinergic system the puzzle is far from being complete It is still unclear how this single neuropeptide could exert such pleiotropic neuromodulatory effects Extending the comprehension of the mechanisms underlying the complex roles of the oxytocin will be of great interest as this molecule has the potentiality to be used as a drug treatment
