Oldham, Jan Myland, Jerome Spanier, 2010-07-15 This book comprehensively covers several hundred functions or function families in chapters that progress by degree of complexity it starts with simple integer valued functions then moves on to polynomials Bessel hypergeometric and hundreds more *Equator* Keith B. Oldham, Jan Myland, Jerome Spanier, 2008-10-16 Equator is software designed to generate numerical values of over 200 mathematical functions in common use by engineers scientists and others Among the functions made available are simple ones such as cosines and binomial coefficients as well as more complex examples such as Bessel functions and elliptic integrals The Windows based Equator software is available as an integral part of the book *An Atlas of Functions* Second Edition although its utility is not limited to users of this book The Atlas is available in both print and electronic formats full details can be found at www.springer.com Equator is sold as a stand alone unit in part to benefit those who may access the electronic version of the Atlas through their library **Zeta and Q-Zeta Functions and Associated Series and Integrals** H. M. Srivastava, Junesang Choi, 2011-10-25 Zeta and q Zeta Functions and Associated Series and Integrals is a thoroughly revised enlarged and updated version of *Series Associated with the Zeta and Related Functions* Many of the chapters and sections of the book have been significantly modified or rewritten and a new chapter on the theory and applications of the basic or q extensions of various special functions is included This book will be invaluable because it covers not only detailed and systematic presentations of the theory and applications of the various methods and techniques used in dealing with many different classes of series and integrals associated with the Zeta and related functions but stimulating historical accounts of a large number of problems and well classified tables of series and integrals Detailed and systematic presentations of the theory and applications of the various methods and techniques used in dealing with many different classes of series and integrals associated with the Zeta and related functions **Basic Complex Analysis** Barry Simon, 2015-11-02 *A Comprehensive Course in Analysis* by Poincar Prize winner Barry Simon is a five volume set that can serve as a graduate level analysis textbook with a lot of additional bonus information including hundreds of problems and numerous notes that extend the text and provide important historical background Depth and breadth of exposition make this set a valuable reference source for almost all areas of classical analysis Part 2A is devoted to basic complex analysis It interweaves three analytic threads associated with Cauchy Riemann and Weierstrass respectively Cauchy's view focuses on the differential and integral calculus of functions of a complex variable with the key topics being the Cauchy integral formula and contour integration For Riemann the geometry of the complex plane is central with key topics being fractional linear

transformations and conformal mapping For Weierstrass the power series is king with key topics being spaces of analytic functions the product formulas of Weierstrass and Hadamard and the Weierstrass theory of elliptic functions Subjects in this volume that are often missing in other texts include the Cauchy integral theorem when the contour is the boundary of a Jordan region continued fractions two proofs of the big Picard theorem the uniformization theorem Ahlfors's function the sheaf of analytic germs and Jacobi as well as Weierstrass elliptic functions

Numerical methods for scientists and engineers H. M. Antia, 2012-11-15 This book presents an exhaustive and in depth exposition of the various numerical methods used in scientific and engineering computations It emphasises the practical aspects of numerical computation and discusses various techniques in sufficient detail to enable their implementation in solving a wide range of problems The main addition in the third edition is a new Chapter on Statistical Inferences There is also some addition and editing in the next chapter on Approximations With this addition 12 new programs have also been added

Experimental and Computational Mathematics Jonathan M. Borwein, 2010 A quiet revolution in mathematical computing and scientific visualization took place in the latter half of the 20th century These developments have dramatically enhanced modes of mathematical insight and opportunities for exploratory computational experimentation This volume collects the experimental and computational contributions of Jonathan and Peter Borwein over the past quarter century
