in the context of learning and applying physics**

In the third edition of this well-used and highly regarded undergraduate textbook, authors Harvey Gould and Jan Tobochnik are joined by Wolfgang Christian for a thorough and progressive update using their community's best open physics programming language. The text teaches the essential ideas for teaching and learning physics concepts and their applications through computer simulations. This new edition uses object-oriented programming and the development of good programming habits in the context of doing physics. Important for students, the text allows individuals with a wide variety of backgrounds and abilities to reach significant

understanding with new material on Java, computer systems, rigid body dynamics, and relativity.

Learning physics through examples using computer simulations

is at a variety of levels within the physics curriculum.
