An Introduction to High-Frequency Finance Ramazan Gençay, Michel Dacorogna, Ulrich A. Muller, Olivier Pictet, Richard Olsen, 2001-05-29 Liquid markets generate hundreds or thousands of ticks the minimum change in price a security can have either up or down every business day Data vendors such as Reuters transmit more than 275 000 prices per day for foreign exchange spot rates alone Thus high frequency data can be a fundamental object of study as traders make decisions by observing high frequency or tick by tick data Yet most studies published in financial literature deal with low frequency regularly spaced data For a variety of reasons high frequency data are becoming a way for understanding market microstructure This book discusses the best mathematical models and tools for dealing with such vast amounts of data This book provides a framework for the analysis modeling and inference of high frequency financial time series With particular emphasis on foreign exchange markets as well as currency interest rate and bond futures markets this unified view of high frequency time series methods investigates the price formation process and concludes by reviewing techniques for constructing systematic trading models for financial assets An Introduction to High-frequency Finance Michel M. Dacorogna, 2001 Provides a framework for the analysis modelling and inference of high frequency financial time series Emphasizing foreign exchange markets currency interest rate and bond futures markets it investigates price formation processes and reviews systematic trading models for financial assets **High Frequency Financial Econometrics** Luc Bauwens, Winfried Pohlmeier, David Veredas, 2007-12-31 In this paper we propose a new econometric approach to jointly model the time series dynamics of the trading process and the revisions of ask and bid prices We use this model to test the validity of certain symmetry assumptions very common among microstructure models Namely we test whether ask and bid quotes respond symmetrically to trade related shocks and whether buyer initiated trades and seller initiated trades are equally informative In essence the procedure we propose generalizes Hasbrouck s 1991 vector autoregressive model for signed trades and changes in the quote midpoint by relaxing the implicit symmetry assumptions in his model The properties of the empirical model are derived from a structural dynamic model for ask and bid prices In this model ask and bid prices share a common lung run component the efficient price The long term value of the stock varies due to buyer initiated shocks seller initiated shocks and trade unrelated shocks The transitory components of ask and bid prices are characterized by two correlated and trade dependent stochastic processes whose dynamics are allowed to differ The trading process is endogenous Buyer and seller initiated trades are generated by two idiosyncratic but mutually dependent stochastic processes The generating processes of quotes and trades both depend on several exogenous variables that feature the trades and the market conditions An Introduction to High-frequency Finance Michel M. Dacorogna, 2007 High-Frequency Trading Irene Aldridge, 2013-04-22 A fully revised second edition of the best guide to high frequency trading High frequency trading is a difficult but profitable endeavor that can generate stable profits in various market conditions But solid footing in
