Oceans Participant, Jon Bowermaster, 2010-03-23 This unique tie in to the major motion picture *Oceans* coming this April from Disney National Geographic explores the health of our oceans and what we can do to improve it More than 75 percent of the globe is covered by the oceans It is sometimes difficult to understand why it is called Planet Earth rather than Planet Ocean Since half the world's human population lives within a stone's throw of an ocean coastline the oceans health is increasingly important Rich with resources and potential as a source of renewable energy new drugs drinking water for years we have treated them as both infinite and undamageable But they are not Over fishing climate change pollution acidification and more have put the world's oceans and marine life at great risk *Oceans* gathers some of the most insightful visionaries explorers and ocean lovers marine biologists politicians environmentalists fishermen sportsmen deep divers and more in a unique anthology in which each speaks to a unique aspect of our world's most dimly understood dimension

The World Is Blue Sylvia A. Earle, 2009-09-29 A Silent Spring for our era this eloquent urgent fascinating book reveals how just 50 years of swift and dangerous oceanic change threatens the very existence of life on Earth Legendary marine scientist Sylvia Earle portrays a planet teetering on the brink of irreversible environmental crisis In recent decades we've learned more about the ocean than in all previous human history combined But even as our knowledge has exploded so too has our power to upset the delicate balance of this complex organism Modern overexploitation has driven many species to the verge of extinction from tiny but indispensable biota to magnificent creatures like tuna swordfish and great whales Since the mid 20th century about half our coral reefs have died or suffered sharp decline hundreds of oxygen deprived dead zones blight our coastal waters and toxic pollutants afflict every level of the food chain Fortunately there is reason for hope but what we do or fail to do in the next ten years may well resonate for the next ten thousand The ultimate goal Earle argues passionately and persuasively is to find responsible renewable strategies that safeguard the natural systems that sustain us The first step is to understand and act upon the wise message of this accessible insightful and compelling book

A Passion for This Earth Michelle Benjamin, 2009-07-01 David Suzuki's lifelong work as an environmentalist naturalist and scientist have influenced countless others in their fight to save the planet 20 such
