Aging Mechanisms Nozomu Mori, Inhee Mook-Jung, 2015-11-26 This book brings together the most up to date information on recent research results of leading laboratories on aging science in East Asia particularly in Japan Korea and Hong Kong Starting with a comprehensive overview of various hypotheses on biological mechanisms of aging by Dr Sataro Goto each chapter covers broad aspects of the most recent findings in aging related topics centenarian studies and genome analysis of progeria metabolic biochemistry and neurobiology longevity controls in yeast and nematodes oxidative stress and calorie restriction and neurodegeneration mechanisms in Alzheimer s and Huntington s diseases with further potential therapeutic approaches to these age related neurodegenerative diseases Also included in part is a summary and the outcomes of a scientific discussion forum called the Asian Aging Core for Longevity AACL that has been held annually alternating between Japan and Korea during the last decade This book can serve as a useful resource for finding appropriate collaborators in the areas it covers The target readership is made up of graduate students and researchers at universities medical and or life science schools and biomedical and pharmaceutical institutes Why does aging exist How do we age How is each organism s lifespan determined These are fundamental questions in the field We may be still far from achieving a complete view of aging mechanisms but this book **Aging Mechanisms** offers an excellent opportunity to become familiar with the most updated progress in the biomedical research of aging in Japan and Korea the two leading nations for human longevity **Aging**

Mechanisms II Nozomu Mori, 2022-04-28 This book describes the recent advancement of basic research on the biology of aging and longevity studies in various organisms as well as the neurobiology of aging and neurodegeneration mechanisms Chapters present new findings and conceptual developments concerning the basic mechanisms of aging and longevity determination As a follow up volume to the previous book **Aging Mechanisms 2015** it overviews the rapid progress of aging research introducing new topics from leading laboratories in Japan Chapter contributors are selected based on recent scientific achievements on the mechanisms of aging in various model organisms including yeast worm C elegans fly Drosophila mice and rats Chapters are ordered from the discussion on molecular and cellular levels to physiological and systemic levels The book also provides an overview of aging science in the region and helps readers quickly grasp who is doing what in this research area As the aging of population becomes an ever more pressing issue in Asia advancing the understanding of basic mechanisms of organism aging and longevity determination will be crucial to developing more effective therapies and protective strategies Researchers and graduate students in biomedical aging research will find this as a rich source of information and a stimulus to novel research directions Aging Mechanisms II Nozomu Mori, 2022 This book describes the recent advancement of basic research on the biology of aging and longevity studies in various organisms as well as the neurobiology of aging and neurodegeneration mechanisms Chapters present new findings and conceptual developments concerning the basic mechanisms of aging and longevity determination As a follow up volume to the previous

book *Aging Mechanisms 2015* it overviews the rapid progress of aging research introducing new topics from leading laboratories in Japan Chapter contributors are selected based on recent scientific achievements on the mechanisms of aging in various model organisms including yeast worm *C. elegans* fly *Drosophila* mice and rats Chapters are ordered from the discussion on molecular and cellular levels to physiological and systemic levels The book also provides an overview of aging science in the region and helps readers quickly grasp who is doing what in this research area As the aging of population becomes an ever more pressing issue in Asia advancing the understanding of basic mechanisms of organism aging and longevity determination will be crucial to developing more effective therapies and protective strategies Researchers and graduate students in biomedical aging research will find this as a rich source of information and a stimulus to novel research directions

Handbook of the Neuroscience of Aging Patrick R. Hof, Charles V. Mobbs, 2010-05-22 A single volume of 85 articles the *Handbook of the Neurobiology of Aging* is an authoritative selection of relevant chapters from the *Encyclopedia of Neuroscience* the most comprehensive source of neuroscience information assembled to date AP Oct 2008 The study of neural aging is a central topic in neuroscience neuropsychology and gerontology Some well known age related neurological diseases include Parkinson's and Alzheimer's but even more common are problems of aging which are not due to disease but to more subtle impairments in neurobiological systems including impairments in vision memory loss muscle weakening and loss of reproductive functions changes in body weight and sleeplessness As the average age of our society increases diseases of aging become more common and conditions associated with aging need more attention by doctors and researchers This book offers an overview of topics related to neurobiological impairments which are related to the aging brain and nervous system Coverage ranges from animal models to human imaging fundamentals of age related neural changes and pathological neurodegeneration and offers an overview of structural and functional changes at the molecular systems and cognitive levels Key pathologies such as memory disorders Alzheimer's dementia Down syndrome Parkinson's and stroke are discussed as are cutting edge interventions such as cell replacement therapy and deep brain stimulation There is no other current single volume reference with such a comprehensive coverage and depth Authors selected are the internationally renowned experts for the particular topics on which they write and the volume is richly illustrated with over 100 color figures A collection of articles reviewing our fundamental knowledge of neural aging the book provides an essential affordable reference for scientists in all areas of Neuroscience Neuropsychology and Gerontology The most comprehensive source of up to date data on the neurobiology of aging review articles cover normal sensory and cognitive aging neuroendocrine structural and molecular factors and fully address both pathology and intervention Chapters represent an authoritative selection of relevant material from the most comprehensive source of information about neuroscience ever assembled *Encyclopedia of Neuroscience* synthesizing information otherwise dispersed across a number of journal articles and book chapters and saving researchers the time consuming process of finding and integrating this information themselves Offering outstanding

scholarship each chapter is written by an expert in the topic area and over 20% of chapters feature international contributors representing 11 countries Provides more fully vetted expert knowledge than any existing work with broad appeal for the US UK and Europe accurately crediting the contributions to research in those regions Fully explores various pathologies associated with the aging brain Alzheimer s dementia Parkinson s memory disorders stroke Down s syndrome etc Coverage of disorders and key interventions makes the volume relevant to clinicians as well as researchers Heavily illustrated with over 100 color figures **Frontiers in Clinical Drug Research - Alzheimer Disorders** Atta-ur-Rahman,2016-07-14

Positive Ageing and Learning from Centenarians evaluates the mechanisms of positive ageing in a uniquely interdisciplinary way to explore the question of how we age and how some people age successfully Drawing together the findings of recognised longevity researchers from around the world the book applies an integrated vision to educational and social aspects of human ageing It examines research into centenarians and considers most of the disciplines related to longevity and healthy aging and aspects such as education psychology philosophy anthropology demography sociology economics as well as those related to nutrition and biological factors of longevity The book examines how the results of these scientific investigations could improve the well being of the oldest olds in the future especially in the context of ageing societies It provides an answer to the question of what we can learn from centenarians and what lessons we can from their lifestyle which can contribute to live longer better and happier Based on cutting edge research the book will be highly relevant reading for researchers academics and students in the field of ageing and longevity mental health research health science gerontology and psychology **ARE WE READY TO LIVE 150 YEARS** DAVID SANDUA,2024-12-04 In the near future the possibility of living up to 150 years transitions from utopia to scientific and social ambition Advances in biotechnology nanotechnology regenerative medicine and genetic editing have revolutionized the understanding of human aging igniting

ethical economic and cultural debates This book delves into the multifaceted realm of prolonged longevity from its biological foundations to its societal implications covering topics such as the impact of extended life on family structures environmental sustainability and workforce dynamics Through an interdisciplinary lens it invites readers to reflect on the balance between quantity and quality of life posing a provocative question are we truly prepared for a society where living 150 years becomes the norm

Topics in Biomedical Gerontology Pramod C. Rath,Ramesh Sharma,S. Prasad,2016-10-20 This book presents a collection of articles on various aspects of current research on aging These include model systems cellular biochemical and molecular aspects of experimental aging research as well as selected intervention studies on age related diseases Aging is a global challenge to human society Children are always in a hurry to become adults while adults produce offspring and add to the gene pool However after adulthood or the attainment of reproductive maturity all physiological parameters of the living organism start to undergo the aging process Old age sets in slowly but surely and usually continues for a prolonged period If vigor and vitality are the main advantages of adulthood old age offers the rewards of experience and maturity Biologists ask questions such as Why do we age How do we become old Is it possible to slow down postpone or even prevent aging In turn medical experts ask What are the diseases associated with old age Are there medicines that can help affected elderly patients In fact both groups are asking themselves how can we add more health to old age Healthy aging is the dream of every individual But to achieve this it is fundamental that we first understand the cellular biochemical and molecular basis of the aging process in mammalian cells tissues and intact living organisms which can serve as experimental model systems in Biomedical Gerontology Once the biology of aging is understood at the genetic and molecular levels interventional approaches to aging and its associated diseases may be easier to plan and implement at the preclinical level **Aging of**

the Central Nervous System V. V. Frolkis,V. V. Bezrukov,1979-11-16 **Nature's Gift to Neuroscience** Chun-Fang Wu,Joy Alcedo,2022-02-27 In the 1960s Sydney Brenner proposed to use the nematode worm *Caenorhabditis elegans* to discover the control mechanisms of animal development and to reveal how a small number of neurons generate different behaviours giving birth to a vibrant community that uses this animal model for their studies Brenner was aided in his aim by John Sulston who mapped the *C. elegans* cell lineages from a single cell to the multicellular adult which transformed the field of developmental biology As a tribute to these two men this book captures the perspectives of some of the early pioneers of the worm community from Martin Chalfie Robert Waterston and Donald Moerman to Catherine Rankin Antony Stretton and John White It also includes contributions from subsequent generations of the community who explore the development and function of the *C. elegans* nervous system This book features how this animal has become one of the best models for elucidating the biology of different sensory modalities and their complex behavioural outputs or how this animal's survival strategies have contributed to our understanding of ageing and neurodegeneration Thus this volume documents the development of the *C. elegans* neuroscience field from infancy to maturity The chapters in this book were originally published

as a special issue of the Journal of Neurogenetics
