Agroecology Agroecology:

Agroecology, Ecosystems and Sustainability in the Tropics G. Poyyamoli, 2017-06-26 Tropical ecosystems are some of the most biologically and ecologically diverse in the world. Traditional local agroecosystems in the tropics reflect this diversity and provide excellent examples of how nature can be used as the model for designing and managing sustainable agroecosystems. This book brings together such examples. Using an agroecological approach, the collection of chapters demonstrates how agroecology must simultaneously be a science, a practice, and a movement for social change towards a paradigm of sustainability that engages all parts of the food system from the field to the table. Chapter contributors were selected from multiple countries and backgrounds, providing a valuable diversity of approaches and knowledge systems, and the interaction of these systems gives this book the important transdisciplinarity that has become a key component of agroecology. Working across disciplines and knowledge systems is necessary in order to link the multiple components of food systems that promote effective change. As food systems return to the diversity, complexity, and resilience they once had, it is collections of experiences as presented in this book that provide examples of the path we must be on. Steve Gliessman, Professor Emeritus of Agroecology, University of California Santa Cruz, USA. *Introduction to Agroecology* Paul Wojtkowski, 2006-10-17 A crucial reference textbook that provides a wide spectrum of information in one easily understandable source. The essence of agroecology lies in harnessing and harmonizing the forces of nature for productive purpose. *Introduction to Agroecology: Principles and Practices* comprehensively explains how this is done, providing a detailed, inclusive look at the underlying theories, concepts, and practices. This allows the reader to explore the full range of possibilities of the nature-agricultural interface and to view agroecology in its entirety, all while providing a clear understanding of the inherent complexity. Productive threats to cropping, such as soil depletion, drought, plant-eating insects, heat, and cold, weeds, and small and large animals, are discussed in depth with preventative strategies for each. All together in one easy-to-use book. This unique introductory reference source is not only aimed at the novice but also the more advanced student. In a departure from the norm for introductory material, extensive endnotes elaborate upon the basic information, presenting a full look at the arguments and controversies within the field. The endnotes include over 500 citations, offering a broad window that encompasses ecology, sociology, conservation, and environmental studies, and several other fields. The text also contains numerous charts, figures, and tables to clarify data and ideas. *Introduction to Agroecology* reviews and discusses agroecological goals such as profit, quality of life, and minimum disturbance of the natural ecosystem; spatial principles with resource concepts such as capture, production balance, and biodiversity; planting densities, ratios, and spatial patterns; facilitation of nutrient and water capture; transfer; ecosystem governance; certainty; sustainability threats such as drought, wind, flood, temperature, and fire; the use of fences, repellent plants, fauna, and other means to stave off large animal threats; basic insect countermeasures; agrotechnologies; subdivision; scaling; design packages; agrobiodiversity; adjustments; and
