Air

Pollution Control Equipment H. Brauer, Y. B. G. Varma, 2012-12-06 This book has arisen directly from a course on Air and Water Pollution Control delivered by the first named author at the Technical University of Berlin. Extractions of this course have been presented in Brazil, Turkey and India. It was at the Indian Institute of Technology of Madras where the first named author got in contact with Professor Varma who turned out to be a suggestive cooperative coauthor. This book is addressed primarily to chemical, environmental and mechanical engineers engaged in the design and operation of equipment for air pollution control. But it will certainly be helpful to chemists and physicists confronted with the solution of environmental problems. Furthermore, it is intended as a text book for engineering courses on environmental protection. The goal of the book is the presentation of knowledge on design and operation of equipment applicable to the abatement of harmful emissions into air. The technology of air pollution control is of relatively young age but it has already achieved a high degree of performance due to the research and development work invested in the last decades in this field. *Air Pollution Control Equipment*

Louis Theodore, Anthony J. Buonicore, 1988-01-31 Unique problem and solution approach for quickly mastering a broad range of calculations. This book's problem and solution approach enables readers to quickly grasp the fundamentals of air pollution control equipment and essential applications. Moreover, the author sets forth solid principles for the design and selection of air pollution control equipment as well as for its efficient operation and maintenance. Readers gain a deep understanding of both the equipment itself and the many factors affecting performance. Following two introductory chapters, the book dedicates four chapters to examining control equipment for gaseous pollutants including adsorption, absorption and incineration equipment. The remaining six chapters deal with equipment for managing airborne particulate pollutants including gravity settlers, cyclones, electrostatic precipitators, scrubbers and baghouses. The appendix contains discussions of hybrid systems, the SI system including conversion constants and a cost equipment model. Each chapter offers a short introduction to the control device discussed. Next, progressively more difficult problems with accompanying solutions enable readers to build their knowledge as they advance through the chapter. Problems reflect the most recent developments in pollution control and include a variety of performance equations and operation and maintenance calculations. Each problem includes a statement of the problem, the data used to solve the problem and a detailed solution. Readers may further hone their skills by visiting the text's Web site for additional problems and solutions. This publication serves both as a textbook for engineering students and as a reference for engineers and technicians who need to ensure that air pollution control equipment operates efficiently and enables their facility to meet all air pollution control standards and regulations.
