Social Skills Across the Life Span Douglas W. Nangle, Cynthia A. Erdley, Rebecca Schwartz-Mette, 2020-05-21 Social skills are critical to psychological adjustment across the lifespan. These skills are necessary for attaining a variety of important social, emotional, and interpersonal goals. Social skill deficits and resulting negative social interactions are associated with a wide variety of adjustment problems and psychological disorders. *Social Skills across the Life Span* Theory is a comprehensive social skills volume providing in-depth coverage of theory, assessment, and intervention. Divided into three major sections, the volume begins with the definition of social competence, developmental factors, and relations to adjustment. This is followed by coverage of general assessment and intervention issues across the lifespan. In the third section, program developers describe specific evidence-based interventions. Identifies how social skills influence social competence and well-being. Addresses the full lifespan. Reviews methods to assess and intervene with children and adults. Details evidence-based interventions for children and adults.

Autism: The Movement (Sensing) Perspective a Decade Later Elizabeth B. Torres, Jonathan T. Delafield-Butt, Vikram K. Jaswal, Susan Crawford, Ashok Srinivasan, Brittany Travers, 2025-08-19 A decade ago in 2013 the Research Topic *Autism: The Movement Perspective* proposed the radical idea that using movement and its sensations could help us better understand the many complex layers of autism spectrum disorders. Inspired by earlier work from other fields, the work positioned front and center approaches from neuromotor control, infusing the research with new computational ideas to study autism across the human lifespan. Through the lens of motor variability as a form of kinesthetic reafference, causal inference, and predictive codes, the Research Topic brought together a group of researchers, parents, practitioners, and self-advocates to rethink autism as sensory-motor differences contributing to the emergence of powerful coping mechanisms that advanced our understanding of how the human brain develops and functions. Today, with new improvements in biosensing technologies and neuroscience and the embodied and affective psychology on which development is based, we revisit this Research Topic, approaching autism anew through a modernized lens of precision aimed at enabling socio-motor agency.
