

2.3 User Environment

Describe the working environment of the target user. Here are some suggestions.

- How many people are involved in completing the task? Is this changing?
- How long is a task cycle? How much time is spent in each activity? Is this changing?
- Are there any unique environmental constraints: controlled environment, mobile, outdoors, and so on?
- Which system platforms are in use today? Future platforms?
- What other applications are in use? Does your application need to integrate with them?

2.4 Key User Needs

List the key problems or needs as perceived by the user. Clarify the following issues for each problem.

- What are the reasons for this problem?
- How is it solved now?
- What solutions does the user envision?

Ranking and cumulative-voting techniques for these needs indicate problems that *must* be solved versus issues the user would *like* to be solved.

2.5 Alternatives and Competition

Identify any alternatives available to the user. These can include buying a competitor's product, building a homegrown solution, or simply maintaining the status quo. List any known competitive choices that exist. Include the major strengths and weaknesses of each competitor as perceived by the end user.

The Openxp Solution Dr. Sandra Walsh,2016-03-31 Over recent decades an abundance of reports have established that significant difficulties are experienced with the development of

requirements in software projects. Traditionally requirements are documented prior to development remaining fixed with little scope for subsequent change. However for competitive domains change to initial expectations frequently occurs and should be accommodated to increase the likelihood of project success. Agile Methods (AMs) recognise this creating shorter development cycles and increased customer involvement thus contributing toward higher levels of adaptability for changing requirements. However despite widespread adoption problems still remain as considerable difficulty exists in managing negotiation between interdisciplinary stakeholder groups. Specific problems include difficulty achieving a collaborative approach, early detection and resolution of requirements conflict and limited access to suitable stakeholders also contributes toward developers not fully understanding the domain. In response to these challenges this book has been written to address the inclusion of input from critical stakeholders on software development projects. This is achieved by utilizing Home Care Systems (HCS) as an exemplar for Dynamically Adaptive Systems (DAS) illustrating how AMs can be extended to better suit the desirable characteristics for an evolutionary Requirements Engineering (RE) approach to be developed. The findings from multiple studies both academic and industry based inform the development of a novel evolutionary framework called OpenXP to improve the facilitation of agile requirements elicitation in complex business domains. OpenXP provides the Agile Business Analyst with a practical solution to the strategic consolidation of multiple diverse viewpoints in developing a representative perspective of the overall project goal. Specifically this novel approach introduces a more participatory elicitation process extending hands on support for prioritization decision making and the provision of an informative workspace including upper level business context needed for developing user stories. The OpenXP framework is a three phased solution consisting of nine specific steps linked with four broader facets. Each facet is then responsible for implementing one or more strategic functions that comprise Stakeholder Coordination, Business and IT Alignment, Effective Communication, Adaptability Integration on agile software projects.

The Business Value of Software Michael D. S. Harris, 2017-09-01

In business driving value is a key strategy and typically starts at the top of an organization. In today's digital age driving software value is also an important and often overlooked key strategy. Executives and the corporate board need to expect the highest level of business value from the software the organization is developing, buying and selling. In today's digital transformation marketplace it is imperative that organizations start driving business value from software development initiatives. For many years the cost of software development challenged organizations with questions such as: How do we allocate software development costs? Should these costs be considered an overhead expense? Are we getting the most value possible for our investment? A fundamental problem has been built into these questions: the focus on cost. In almost every other part of the organization maximizing profit or in the case of a not for profit maximizing the funds available provides a clear focus with metrics to determine success or failure. In theory simply aligning software spending with the maximizing profit goals should be sufficient to avoid any questions about value for money. Unfortunately this alignment hasn't turned out to be so simple and

the questions persist particularly at the strategic or application portfolio level In this book Michael D S Harris describes how a software business value culture one where all stakeholders including technology and business have a clear understanding of the goals and expected business value from software development The book shows readers how they can transform software development from a cost or profit center to a business value center Only a culture of software as a value center enables an organization to constantly maximize business value flow through software development If your organization is starting to ask how it can change software from a cost center to a value center this book is for you Clearly Agile Giles Lindsay,2024-04-08 The future is CLEAR the future is AGILE Clearly Agile is more than just a book on business agility It s an essential guide for anyone aspiring to lead successfully in a fast changing business world Step into the future with confidence equipped with the knowledge and tools to master the art of business agility and lead your organization to sustained success In Clearly Agile Giles connects the dots of agility guiding readers from the importance of leadership and mindset to team and enterprise agility This book will leave you with actionable strategies to improve how your organization works no matter what the future brings Laura M Powers Chief Executive Chief Executive Officer Business Agility Institute Any leader who is hoping to evolve their organization in an agile enterprise will discover actionable and impactful insights in this book Scott Ambler Co creator of Disciplined Agile Giles is well known as an excellent executive and agile coach I am very pleased that he has shared his comprehensive knowledge in this excellent book It covers a wide spectrum of guidance on business agility and is definitely worth a read Mark Lines Co creator of Disciplined Agile Giles Lindsay CEO of Agile Delta Consulting is a seasoned technology and Agile leader and coach with 25 years of tech industry experience Known for his strategic acumen in aligning technology with business goals he has successfully scaled high performing teams in both startups and leading enterprises driving innovation and growth through his visionary approach and adept stakeholder management Governance of Innovation Project Management Christoph Johann Stettina,2025-10-01 The study is motivated by the aspiration to understand project governance in organizations pursuing the development of new products and services across multiple knowledge worker teams In particular the following problem statement guides the study Is governance of innovation project management necessary or neglected Taking the example of agile teams illustrated here is how the advancements in team based project management approaches force us to rethink governance of innovation project management The findings are based on eight studies The data consists of results from a total of 53 knowledge worker teams across 44 organizations in 8 countries viz about 3800 minutes of recorded material enriched by four quantitative surveys and many hours of observations The two main conclusions drawn from this study are 1 fundamentally different approaches to governance of innovation projects are a prerequisite for a success of projects developing new products and services and 2 governance particularly in heavily top down influenced fields such as public administration will benefit from advancements in agile project management methods
