Aida Artificial Intelligence Supported Conceptual Design Of Aircraft:

AIDA, 2004 *Delft Science in Design 2* M. Eekhout, T. Tomiyama, 2008-10-22 The mission of the publication Delft Science in Design is to promote and advance the exchange of lessons learned on design between university and industry Also it aims to amplify the visibility of the results of academic effort in design at Delft University The questions What is design What is engineering What is science can be fiercely debated Between the extremes of artistic design and pure science the transitions are like in fluid they are smooth and gradual An approach focusing on how the university deals with knowledge may provide a better entry to the debate The mutual understanding between scientists from different disciplines may get lost It is one of the two major objectives of the Delft Science in Design congress to offer a kaleidoscope of the activities of the various faculties to all university colleagues and students so that staff and students can be made aware of activities in other laboratories and have the opportunity to be informed on details Being informed is the first step to understanding

Knowledge-Based Integrated Aircraft Design Raghu Chaitanya Munjulury, 2017-05-23 The design and development of new aircraft are becoming increasingly expensive and timeconsuming To assist the design process in reducing the development cost time and late design changes the conceptual design needs enhancement using new tools and methods Integration of several disciplines in the conceptual design as one entity enables to keep the design process intact at every step and obtain a high understanding of the aircraft concepts at early stages This thesis presents a Knowledge Based Engineering KBE approach and integration of several disciplines in a holistic approach for use in aircraft conceptual design KBE allows the reuse of obtained aircrafts data information and knowledge to gain more awareness and a better understanding of the concept under consideration at early stages of design For this purpose Knowledge Based KB methodologies are investigated for enhanced geometrical representation and enable variable fidelity tools and Multidisciplinary Design Optimization MDO The geometry parameterization techniques are qualitative approaches that produce quantitative results in terms of both robustness and flexibility of the design parameterization The information parameters from all tools disciplines and the design intent of the generated concepts are saved and shared via a central database The integrated framework facilitates multi fidelity analysis combining low fidelity models with high fidelity models for a quick estimation enabling a rapid analysis and enhancing the time for a MDO process The geometry is further propagated to other disciplines Computational Fluid Dynamics CFD Finite Element Analysis FEA for analysis This is possible with an automated streamlined process for CFD FEM system simulation to analyze and increase knowledge early in the design process Several processes were studied to streamline the geometry for CFD Two working practices one for parametric geometry and another for KB geometry are presented for automatic mesh generation It is observed that analytical methods provide quicker weight estimation of the design and when coupled with KBE provide a better understanding Integration of 1 D and 3 D models offers the best of both models faster simulation and superior geometrical representation To validate both

the framework and concepts generated from the tools they are implemented in academia in several courses at Linköping University and in industry

Stability and Control of Conventional and Unconventional Aerospace Vehicle

Configurations Bernd Chudoba, 2019-07-23 This book introduces a stability and control methodology named AeroMech capable of sizing the primary control effectors of fixed wing subsonic to hypersonic designs of conventional and unconventional configuration layout Control power demands are harmonized with static dynamic and maneuver stability requirements while taking the six degree of freedom trim state into account The stability and control analysis solves the static and dynamic equations of motion combined with non linear vortex lattice aerodynamics for analysis The true complexity of addressing subsonic to hypersonic vehicle stability and control during the conceptual design phase is hidden in the objective to develop a generic vehicle configuration independent methodology concept The inclusion of geometrically asymmetric aircraft layouts in addition to the reasonably well known symmetric aircraft types contributes significantly to the overall technical complexity and level of abstraction The first three chapters describe the preparatory work invested along with the research strategy devised thereby placing strong emphasis on systematic and thorough knowledge utilization The engineering scientific method itself is derived throughout the second half of the book This book offers a unique aerospace vehicle configuration independent generic methodology and mathematical algorithm The approach satisfies the initial technical quest How to develop a configuration stability control methodology module for an advanced multi disciplinary aerospace vehicle design synthesis environment that permits consistent aerospace vehicle design evaluations

Advanced Analytics and Artificial Intelligence Applications Ali Soofastaei, 2019-11-13 Computers and machines were developed to reduce time consumption and manual human efforts to complete projects efficiently With fast growing technologies in the field we have finally reached a stage where almost everyone in the world has access to these high technologies However this is just a starting phase because future development is taking a more advanced route in the shape of artificial intelligence AI Although AI is under the computer science umbrella nowadays there is no field unaffected by this high technology The overall aim of using intelligence learning methods is to train machines to think intelligently and make decisions in different situations the same as humans Previously machines were doing what they were programmed to do but now with AI devices can think and behave like a human being This book aims to present the application of advanced analytics and AI in different industries as practical tools to develop prediction optimization and make decision models
