Ergonomics Michael Stein,Peter Sandl,2012-03-30 The variety and increasing availability of hypermedia information systems which are used in stationary applications like operators consoles as well as mobile systems e g driver information and navigation systems in automobiles form a foundation for the mediatization of the society From the human engineering point of view this development and the ensuing increased importance of information systems for economic and private needs require careful deliberation of the derivation and application of ergonomics methods particularly in the field of information systems This book consists of two closely intertwined parts The first theoretical part defines the concept of an information system followed by an explanation of action regulation as well as cognitive theories to describe man information system interaction A comprehensive description of information ergonomics concludes the theoretical approach In the second

practically oriented part of this book authors from industry as well as from academic institutes illustrate the variety of current information systems taken from different fields of transportation i.e. aviation, automotive and railroad. The reader thus gains an overview of various applications and their context of use as well as similarities and differences in design. This does not only include a description of the different information systems but also places them in the context of the theories and models which were presented in the first part of this book.

Networked Control Systems for Connected and Automated Vehicles Alexander Guda, 2022-11-15

Control of large scale distributed energy systems over communication networks is an important topic with many application domains. The book presents novel concepts of distributed control for networked and cyber physical systems CPS such as smart industrial production lines, smart energy grids and autonomous vehicular systems. It focuses on new solutions in managing data and connectivity to support connected and automated vehicles CAV. The book compiles original research papers presented at the conference Networked Control Systems for Connected and Automated Vehicles Russia. The latest connected and automated vehicle technologies for next generation autonomous vehicles are presented. The book sets new goals for the standardization of the scientific results obtained and the advancement to the level of full autonomy and full self driving FSD. The book presents the latest research in artificial intelligence, assessing virtual environments, deep learning systems and sensor fusion for automated vehicles. Particular attention is paid to new safety standards, safety and security systems and control of epidemic spreading over networks. The issues of building modern transport infrastructure facilities are also discussed in the articles presented in this book. The book is of considerable interest to scientists, researchers and graduate students in the field of transport systems as well as for managers and employees of companies using or producing equipment for these systems.
