Airbus A380 Guy Norris,2005-11-10 Poised for takeoff on that hot morning in April 2005 the Airbus A380 had the purposeful powerful presence of a giant predatory bird With its enormous gulled wings imperiously tall tail and broad domed forepeak it looked ready to take on the world And along the way it has had plenty of supporters and critics No civil airliner since the supersonic Concorde has aroused such emotion such fascination and such cause c l bre To a confident Airbus and the thousands of awestruck workers who cheered it into that cloudless sky over Toulouse it means so much more The European company has been transformed under the broad wings of this incredible project into a single corporate entity from a loose consortium into a new more dynamic force to challenge its worthy adversary Boeing in every market sector

Airbus A380 Owner's Workshop Manual Robert Wicks,2017-11-07 The Airbus A380 is the world s most recognised and most talked about airliner since the Boeing 747 and Concorde appeared in the skies in the late 1960s Designed to challenge Boeing s monopoly in the large aircraft market it made its first flight in April 2005 entering commercial service two years later with Singapore Airlines This jet has become so popular that every four minutes 24 hours a day seven days a week an A380 is taking off or landing somewhere in the world There is no other development in recent aviation history to rival this remarkable aircraft

Condition-Based Maintenance in Aviation Ravi Rajamani, 2018-12-11 Condition Based Maintenance in Aviation The History The Business and The Technology describes the history and practice of Condition Based Maintenance CBM systems by showcasing ten technical papers from the archives of SAE International stretching from the dawn of the jet age down to the present times By scientifically understanding how different components degrade during operations it is possible to schedule inspections repairs and overhauls at appropriate intervals so that any incipient failure can be detected well in advance Today this includes more sensors and analytics so that periodic inspections are replaced by automated continuous inspections and analytical methods that detect imminent failures and predict degradation issues more economically and efficiently Similar concepts are also being developed for delivering prognostics functions such as tracking of remaining useful life RUL of life limited parts in aircraft engines The discipline within CBM that deals with this is called prognostics and health management PHM which covers all aspects of diagnostics and prognostics including modeling of systems and subsystems sensing data transmission storage and retrieval analytical methods and decision making Traditionally nondestructive testing NDT methods have been employed during the major airplane checks to assess structural damage These techniques are enhanced with in situ sensing techniques that can continuously monitor aircraft structures and report on their health The move to condition based assessment of maintenance needs to be balanced by the assurance that safety is not compromised that initial cost of new equipment is amortized by the savings and that regulatory authorities are on board with any modifications to the planned maintenance schedule The trend is clearly to include more CBM functions into Maintenance Repair and Overhaul MRO processes so better cost control can be achieved without ever comprising passenger safety *Flying the Airbus A380* Gib Vogel, 2012-05-01 Since its first flight on 27 April 2005 the Airbus A380 has been the largest passenger airliner in the world Instantly recognizable with its full length upper deck it represents the pinnacle of modern airliner design
