Synthesis of Subsonic Airplane Design E.

Torenbeek, 2013-06-29 Since the education of aeronautical engineers at Delft University of Technology started in 1940 under the inspiring leadership of Professor H J van der Maas much emphasis has been placed on the design of aircraft as part of the student's curriculum. Not only is aircraft design an optional subject for thesis work but every aeronautical student has to carry out a preliminary airplane design in the course of his study. The main purpose of this preliminary design work is to enable the student to synthesize the knowledge obtained separately in courses on aerodynamics, aircraft performances, stability and control, aircraft structures etc. The student's exercises in preliminary design have been directed through the years by a number of staff members of the Department of Aerospace Engineering in Delft. The author of this book, Mr E Torenbeek, has made a large contribution to this part of the study programme for many years. Not only has he acquired vast experience in teaching airplane design at university level but he has also been deeply involved in design-oriented research, e.g. developing rational design methods and systematizing design information. I am very pleased that this wealth of experience, methods and data is now presented in this book.

Aircraft Design Projects Lloyd R. Jenkinson, Jim Marchman, 2003-04-28

Written with students of aerospace or aeronautical engineering firmly in mind, this is a practical and wide-ranging book that draws together the various theoretical elements of aircraft design: structures, aerodynamics, propulsion, control, and others, and guides the reader in applying them in practice. Based on a range of detailed real-life aircraft design projects, including military training, commercial, and concept aircraft, the experienced UK and US-based authors present engineering students with an essential toolkit and reference to support their own project work. All aircraft projects are unique, and it is impossible to provide a template for the work involved in the design process. However, with the knowledge of the steps in the initial design process and of previous experience from similar projects, students will be freer to concentrate on the innovative and analytical aspects of their course project. The authors bring a unique combination of perspectives and experience to this text. It reflects both British and American academic practices in teaching aircraft design. Lloyd Jenkinson has taught aircraft design at both Loughborough and Southampton universities in the UK, and Jim Marchman has taught both aircraft and spacecraft design at Virginia Tech in the US. Demonstrates how basic aircraft design processes can be successfully applied in reality. Case studies allow both student and instructor to examine particular design challenges. Covers commercial and successful student design projects and includes over 200 high-quality illustrations.
