Experimental and Efficient Algorithms Sotiris E. Nikolettseas, 2005-05-03 This book constitutes the refereed proceedings of the 4th International Workshop on Experimental and Efficient Algorithms WEA 2005 held in Santorini Island Greece in May 2005 The 47 revised full papers and 7 revised short papers presented together with extended abstracts of 3 invited talks were carefully reviewed and selected from 176 submissions The book is devoted to the design analysis implementation experimental evaluation and engineering of efficient algorithms Among the application areas addressed are most fields applying advanced algorithmic techniques such as combinatorial optimization approximation graph theory discrete mathematics scheduling searching sorting string matching coding networking data mining data analysis etc *Invitation to Fixed-Parameter Algorithms* Rolf Niedermeier, 2006-02-02 This research level text is an application oriented introduction to the growing and highly topical area of the development and analysis of efficient fixed parameter algorithms for optimally solving computationally hard combinatorial problems The book is divided into three parts a broad introduction that provides the general philosophy and motivation followed by coverage of algorithmic methods developed over the years in fixed parameter algorithmics forming the core of the book and a discussion of the essentials from parameterized hardness theory with a focus on W 1 hardness which parallels NP hardness then stating some relations to polynomial time approximation algorithms and finishing up with a list of selected case studies to show the wide range of applicability of the presented methodology Aimed at graduate and research mathematicians programmers algorithm designers and computer scientists the book introduces the basic techniques and results and provides a fresh view on this highly innovative field of algorithmic research *Experimental and Efficient Algorithms*, 2005 **Geospatial Abduction** Paulo Shakarian, V.S. Subrahmanian, 2011-10-20 Imagine yourself as a military officer in a conflict zone trying to identify locations of weapons caches supporting road side bomb attacks on your country's troops Or imagine yourself as a public health expert trying to identify the location of contaminated water that is causing diarrheal diseases in a local population Geospatial abduction is a new technique introduced by the authors that allows such problems to be solved Geospatial Abduction provides the mathematics underlying geospatial abduction and the algorithms to solve them in practice it has wide applicability and can be used by practitioners and researchers in many different fields Real world applications of geospatial abduction to military problems are included Compelling examples drawn from other domains as diverse as criminology epidemiology and archaeology are covered as well This book also includes access to a dedicated website on geospatial abduction hosted by University of Maryland Geospatial Abduction targets practitioners working in general AI game theory linear programming data mining machine learning and more Those working in the fields of computer science mathematics geoinformation geological and biological science will also find this book valuable **NEO 2016** Yazmin Maldonado, Leonardo Trujillo, Oliver Schütze, Annalisa Riccardi, Massimiliano Vasile, 2017-09-12 This volume comprises a selection of works presented at the

Numerical and Evolutionary Optimization NEO 2016 workshop held in September 2016 in Tlalnepantla Mexico The development of powerful search and optimization techniques is of great importance in today s world and requires researchers and practitioners to tackle a growing number of challenging real world problems In particular there are two well established and widely known fields that are commonly applied in this area i traditional numerical optimization techniques and ii comparatively recent bio inspired heuristics Both paradigms have their unique strengths and weaknesses allowing them to solve some challenging problems while still failing in others The goal of the NEO workshop series is to bring together experts from these and related fields to discuss compare and merge their complementary perspectives in order to develop fast and reliable hybrid methods that maximize the strengths and minimize the weaknesses of the underlying paradigms In doing so NEO promotes the development of new techniques that are applicable to a broader class of problems Moreover NEO fosters the understanding and adequate treatment of real world problems particularly in emerging fields that affect all of us such as healthcare smart cities big data among many others The extended papers presented in the book contribute to achieving this goal

Metaheuristics Marc Sevaux,Alexandru-Liviu Olteanu,Eduardo G.
