Asce Manual 42:

Structural Design for Physical Security Task Committee on Structural Design for Physical Security, 1999-01-01
Prepared by the Task Committee on Structural Design for Physical Security of the Structural Engineering Institute of ASCE
This report provides guidance to structural engineers in the design of civil structures to resist the effects of terrorist bombings. As dramatized by the bombings of the World Trade Center in New York City and the Murrah Building in Oklahoma City, civil engineers today need guidance on designing structures to resist hostile acts. The U.S. military services and foreign embassy facilities developed requirements for their unique needs, but these documents are restricted. Thus, no widely available document exists to provide engineers with the technical data necessary to design civil structures for enhanced physical security. The unrestricted government information included in this report is assembled collectively for the first time and rephrased for application to civilian facilities. Topics include determination of the threat methods by which structural loadings are derived for the determined threat, the behavior and selection of structural systems, the design of structural components, the design of security doors, the design of utility openings, and the retrofitting of existing structures. This report transfers this technology to the civil sector and provides complete methods guidance and references for structural engineers challenged with a physical security problem.

Modern Protective Structures Theodor Krauthammer, 2008-02-01
In today's world, reasonably predictable military operations have been replaced by low intensity conflicts, less predictable terrorist activities carried out by determined individuals or small groups that possess a wide range of backgrounds and capabilities. Because of the threats posed by this evolving type of warfare, civil engineers and emergency personnel face new challenges in designing facilities to protect lives and property and in conducting effective rescue operations and forensic investigations. Addressing these needs, *Modern Protective Structures* develops realistic guidelines for the analysis, design, assessment, retrofit, and research of protected facilities. After introducing a comprehensive risk management approach, the author provides a general background on explosive devices and their capabilities, as well as explosive effects and the processes that generate them. He then discusses the effects of conventional and nuclear explosions. The book subsequently considers the significant design differences between conventional and nuclear loads and between existing design procedures and state-of-the-art information from recent research. It also summarizes existing blast-resistant design approaches and describes the dynamic responses of structural systems to blasts, shocks, and impacts. Additional coverage includes the behavior of specific structural connections, the traditional concept of P-I diagrams, and progressive collapse. The book concludes with a systematic and balanced protective design approach. Tackling the analytical design, assessment, and hazard mitigation issues associated with short duration dynamic loads, this book examines how impulsive loads affect various types of buildings and facilities. It provides the necessary material to help ensure the safety of persons, assets, and projects.

Concrete Structures Subjected to Impact and Blast Loadings and Their Combinations Chunwei Zhang, Gholamreza Gholipour, 2022-05-08
Although much

research focuses on investigating the responses of reinforced concrete RC structures under sole impact or blast loads the responses of RC structures under a combination of impact and blast loads currently represent a gap in our knowledge The combined actions of impact and blast loadings may be applied to RC structures during accidental or intentional collision of vessels vehicles etc carrying explosive materials A comprehensive study on the vulnerability of various structural members is carried out using finite element FE simulations under combination of impact and blast loads with the variations of various loading and structural related parameters and key parameters This book introduces various structural analysis approaches for concrete structures when subjected to extreme loads such as impact and blast loadings The theory of the combinations of impact and blast loads is proposed that can provide primary insights to the specific readers to develop new ideas in impact and blast engineering including combined actions of extreme loads arising from real world intentional or accidental events This book will be of value to students undergraduate or postgraduate engineers and researchers in structural and civil engineering and specifically those who are studying and investigating the performances of concrete structures under extreme loads *Infrastructure Systems for Nuclear Energy* Thomas T. C. Hsu, Chiun-lin Wu, Jui-Liang Lin, 2013-12-02

Developing sufficient energy resources to replace coal oil and gas is a globally critical necessity Alternatives to fossil fuels such as wind solar or geothermal energies are desirable but the usable quantities are limited and each has inherent deterrents The only virtually unlimited energy source is nuclear energy where safety of infrastructure systems is the paramount concern *Infrastructure Systems for Nuclear Energy* addresses the analysis and design of infrastructures associated with nuclear energy It provides an overview of the current and future nuclear power industry and the infrastructure systems from the perspectives of regulators operators practicing engineers and research academics This book also provides details on investigations of containment structures nuclear waste storage facilities and the applications of commercial academic computer software Specific environments that challenge the behavior of nuclear power plants infrastructure systems such as earthquake blast high temperature irradiation effects soil structure interaction effect etc are also discussed Key features Includes contributions from global experts representing academia and industry Provides an overview of the nuclear power industry and nuclear infrastructure systems Presents the state of the art as well as the future direction for nuclear civil infrastructure systems *Infrastructure Systems for Nuclear Energy* is a comprehensive up to date reference for researchers and practitioners working in this field and for graduate studies in civil and mechanical engineering

The Shock and Vibration Bulletin ,1968 *Protecting People and Buildings from Terrorism* National Research Council, Division on Engineering and Physical Sciences, Board on Infrastructure and the Constructed Environment, Committee for Oversight and Assessment of Blast-effects and Related Research, 2002-01-31 Concerned with the vulnerability of U S civilian and military personnel to terrorist bombing attacks the U S Congress directed the Department of Defense to undertake a comprehensive research and testing program aimed at protecting people in buildings from such attacks The

Blast Mitigation for Structures Program BMSP was initiated in 1997 and has produced a large volume of experimental and analytical data that will permit the design of new more robust buildings as well as the development of methods to retrofit a large number of vulnerable existing structures This report reviews the BMSP program and investigates a process that would use existing institutional infrastructures i e building code and standards writing organizations professional and technical organizations universities and research centers to disseminate knowledge *A Dynamic Ultimate Strength Study of Simply Supported Two-way Reinforced Concrete Slabs* Don R. Denton,1967 **Protecting Buildings from Bomb Damage**

National Research Council,Division on Engineering and Physical Sciences,Commission on Engineering and Technical Systems,Committee on Feasibility of Applying Blast-Mitigating Technologies and Design Methodologies from Military Facilities to Civilian Buildings,1995-10-26 This book provides a brief overview of worldwide terrorist activity and reviews technologies and methods for designing blast resistant buildings These techniques primarily developed by the military have applicability and relevance to the design of civilian structures The volume recommends that a program of applied research and technology transfer be undertaken to hasten the availability and utility of these techniques to the civilian building community **Blast Protection of Civil Infrastructures and Vehicles Using Composites** Nasim Uddin,2010-03-12 With the upsurge in terrorism in recent years and the possibility of accidental blast threats there is growing interest in manufacturing blast hardened structures and retrofitting blast mitigation materials to existing structures Composites provide the ideal material for blast protection as they can be engineered to give different levels of protection by varying the reinforcements and matrices Part one discusses general technical issues with chapters on topics such as blast threats and types of blast damage processing polymer matrix composites for blast protection standards and specifications for composite blast protection materials high energy absorbing composite materials for blast resistant design modelling the blast response of hybrid laminated composite plates and the response of composite panels to blast wave pressure loadings Part two reviews applications including ceramic matrix composites for ballistic protection of vehicles and personnel using composites to protect military vehicles from mine blasts blast protection of buildings using FRP matrix composites using composites in blast resistant walls for offshore naval and defence related structures using composites to improve the blast resistance of columns in buildings retrofitting using fibre reinforced polymer composites for blast protection of buildings and retrofitting to improve the blast response of concrete masonry walls With its distinguished editor and team of expert contributors Blast protection of civil infrastructures and vehicles using composites is a standard reference for all those concerned with protecting structures from the effects of blasts in both the civil and military sectors Reviews the role of composites in blast protection with an examination of technical issues applications of composites and ceramic matrix composites Presents numerical examples of simplified blast load computation and an overview of the basics of high explosives includes important properties and physical forms Varying applications of composites for protection are explored including military and non military vehicles and

increased resistance in building columns and masonry walls

Structural Design of Polymer Composites J.L.

Clarke, 2003-09-02 Independent practical guidance on the structural design of polymer composites is provided for the first time in this book. Structural designers familiar with design of conventional structural materials such as steel and concrete will be able to use it to design a broad range of polymeric composites for structural applications using glass fibre reinforced plastic materials, components, connections and assemblies.
