Revue Générale Nucléaire, 2006 Maîtriser le nucléaire Jean-Louis Basdevant, 2012-03-13 Découverte inopinément peu avant 1900 la physique nucléaire a marqué les temps modernes dans des domaines souvent étrangers les uns aux autres comme la médecine rayons X radiothérapie la guerre armement nucléaire les arts carbone 14 ou encore l'astrophysique observation des supernovae Avec quelques schémas et beaucoup d'exemples Jean-Louis Basdevant nous explique ici en termes clairs ce que sont la radioactivité ses applications et ses dangers Il nous livre les clés des mécanismes qui sont l'œuvre dans les réactions nucléaires avant pendant et après ce qui le conduit à étudier la question hautement sensible de l'électronucléaire À l'appui d'une analyse des grandes catastrophes Three Miles Island en 1979 Tchernobyl en 1986 et Fukushima en 2011 dont il a minutieusement étudié les conséquences il met en lumière l'avenir de cette filière technologique différents types de réacteurs en service différents modes de production mais aussi prolifération des armements Comprenant en outre une synthèse sur les ressources énergétiques et la consommation très inégale d'énergie à l'échelle mondiale cette édition entièrement refondue nous donne les moyens de prendre position en connaissance de cause dans un débat qui cette fois ne restera pas une affaire de spécialistes

Accidents Nucléaires OECD Nuclear Energy Agency, International Atomic Energy Agency, 1993 Some papers in French Parallel title Accidents nucléaires responsabilités et garanties **Énergie nucléaire : le vrai risque** Dominique Louis, Jean-Louis Ricaud, 2021-02-10 La population de la planète va continuer de croître et son

niveau de vie de s'améliorer conduisant d'ici 2050 une hausse de la consommation mondiale d'énergie de l'ordre de 50 %. L'énergie nucléaire associée aux énergies hydraulique éolienne ou solaire constitue la seule solution disponible pour satisfaire ce besoin en énergie qui permette de réduire la place des combustibles fossiles et donc de limiter les rejets de CO₂. Mais comme toute activité humaine l'industrie nucléaire comporte des risques toutefois ces risques sont parfaitement maîtrisables et bien mieux maîtrisés que dans beaucoup d'autres industries. Le recours à l'énergie nucléaire devrait ainsi apparaître incontournable aux gouvernements notamment européens et français qui ont placé la neutralité carbone au cœur de leurs stratégies. Ce choix de l'énergie nucléaire qui est recommandé aussi bien par le GIEC que par l'Agence internationale de l'énergie doit s'accompagner d'une gouvernance irréprochable prérequis fondamental à l'adhésion de l'opinion publique son usage dans le long terme. Finalement le vrai risque pour les décennies venir serait de ne pas tirer parti des performances démontrées de l'énergie nucléaire totalement décarbonée économiquement abordable environnementalement acceptable et de continuer à utiliser des systèmes énergétiques coûteux et polluants. C'est cette réflexion stratégique que ce livre a l'ambition de contribuer à éclairer.

Ingénieur de formation ENSEM Dominique Louis commence sa carrière chez ATEM spécialiste dans l'ingénierie industrielle. En 1994 il crée Assystem groupe international d'ingénierie et de conseil en innovation et en devient le PDG. Diplômé de l'ENS et de l'école des Mines de Paris Jean-Louis Ricaud a une expérience approfondie du monde industriel. Il y a exercé d'importantes responsabilités notamment comme directeur général des activités recyclage et ingénierie du groupe Cogema puis chez Renault et chez Alstom Transport.

Les Merveilleux nuages Harry Bernas, 2023-09-01 T00:00:00+02:00

Le président Emmanuel Macron annonce un nouveau nucléaire pour assurer notre approvisionnement énergétique et pour réduire la production de gaz effet de serre. Harry Bernas interroge ce projet sans concessions partant de la réalité suivante : la manière d'utiliser l'énergie dépend de la structure économique et sociale du pays, structure qui devra évoluer radicalement dans la décennie venir face à l'urgence climatique. Ce nouveau nucléaire est-il donc compatible avec l'adaptation de la société dans le court délai imposé par les changements planétaires ? Qu'en est-il de sa faisabilité ? L'auteur part des faits techniques industriels et sociaux pour dissiper les nuages qui masquent certaines réalités du nucléaire en France. Il discute des aspects préoccupants du parc vieillissement, stockage des déchets à hauts niveaux de radioactivité, comme des projets d'avenir, infrastructures industrielles, rentabilités, retours sur investissement et du lien intime entre nucléaire civil et militaire. Et surtout il montre que dans la période critique qui s'annonce les choix énergétiques si fortement liés aux choix sociaux ne sauraient se passer d'un débat démocratique qu'il est urgent de lancer.

Harry Bernas, physicien spécialiste de nanosciences, a dirigé le Centre de sciences nucléaires et de sciences de la matière CNRS Université Paris Saclay et coordonne un programme européen dans le domaine des matériaux irradiés. Il s'intéresse à l'histoire contemporaine des sciences et aux rapports sciences-technologie. Sociologue par propos de l'histoire du nucléaire il a déjà publié *Le nucléaire au bonheur* Le Pommier 2022.
