

CHAPTER 1

ACCOUNTING INFORMATION SYSTEMS: AN OVERVIEW

SUGGESTED ANSWERS TO DISCUSSION QUESTIONS

1.1 Discuss the concept of a system and the issues of goal conflict and goal congruence.

A system is a set of two or more components that are somehow interrelated and interact together to achieve a specific goal. A system usually consists of smaller components called subsystems. These subsystems have specific and defined functions, which interact with and support the larger system. The concept of systems is key to information technology and AIS. All systems, including the AIS, must work to achieve one or more organizational goals. Goal conflict results when a decision or action of a subsystem is inconsistent with another subsystem or the system (organization) as a whole. Goal congruence results when a subsystem achieves its goals while contributing to the organization's overall goal. Subsystems should maximize organizational goals.

1.2 Give an example of how an AIS can improve decision making, and describe the multistep activities involved in the process.

Decision making is a complex, multistep activity: identify the problem, collect and interpret information, evaluate ways to solve the problem, select a solution methodology, and implement the solution. An AIS can provide assistance in all phases of decision making. Reports can help to identify potential problems. Decision models and analytical tools can be provided to users. Query languages can gather relevant data to help make the decision. Various tools, such as graphical interfaces, can help the decision maker interpret decision model results, evaluate them, and choose among alternative courses of action. In addition, the AIS can provide feedback on the results of actions.

An AIS can help improve decision making in several ways:

- It can identify situations requiring management action. For example, a cost report with a large variance might stimulate management to investigate and, if necessary, take corrective action.
- It can reduce uncertainty and thereby provide a basis for choosing among alternative actions.
- It can store information about the results of previous decisions, which provides valuable feedback that can be used to improve future decisions. For example, if a company tries a particular marketing strategy and the information gathered indicates that it did not succeed, the company can use that information to select a different marketing strategy.
- It can provide accurate information in a timely manner. For example, Walmart has an enormous database that contains detailed information about sales transactions at each of its stores. It uses this information to optimize the amount of each product carried at each store.
- It can analyze sales data to discover items that are purchased together, and can use such information to improve the layout of merchandise or to encourage additional sales of related items. For example, Amazon uses its sales database to suggest additional books for customers to purchase.

Ais Romney Problem Solutions Manual

J Rink

Ais Romney Problem Solutions Manual:

Accounting Information Systems Marshall B. Romney, Paul John Steinbart, Barry E. Cushing, 1997 This text seeks to show the reader how to design and use an accounting information system AIS to provide information useful for decision making Focus boxes providing real world examples of concepts techniques and practices as described are interspersed in the text This edition has chapters on the three basic functions of the AIS together with an understanding of what the system does manually and on data modelling covering how students can use query language to derive traditional financial statements and managerial reports from a database AIS

Structural Equation Modeling Approaches to E-Service Adoption Akgül, Yakup, 2019-04-19 With the modernization of services offered through the internet many traditional face to face services have adopted new e service phenomena Especially prevalent among the younger generations this change in service has promoted many industries to rethink how to best reach their consumers using modern technology Structural Equation Modeling Approaches to E Service Adoption is a pivotal reference source that aims to share the latest empirical research findings within technology acceptance information systems information technology human computer interaction and management information systems While highlighting topics such as e commerce internet banking and technology acceptance this publication explores the understanding of today s e services in a dynamic and complex environment as well as the methods within the field of information systems and information technologies This book is ideally designed for academics students managers and scholars interested in the up and coming research surrounding the field of information technology
